1 - Significant bacteriuria means that bacterial count is :

A - 1000 organisms per ml of urine .

B- 10,000 organisms per ml of urine .

C- 100,000 or more organisms per ml of urine .

2- Precautions during collection of urine sample for laboratory diagnosis in case of UTI include :

A - Cleaning and drying of external genitalia .

B- Middle urine sample is needed .

C - Collection in sterile container .

D- All of the above .

3- If renal tuberculosis is suspected the urine sample used for laboratory diagnosis should be :

A- Early morning sample

B - 3 urine samples are collected on consecutive days .

C- Entire sample is collected .

D- All of the above .

4 - Sterile pyuria means :

A- Presence of pus in urine (more than 10 cells / HPF) .

B- Presence of pus in urine in absence of bacterial growth on ordinary media .

C- Presence of pus in urine with bacterial growth on ordinary media .

5 - Sterile pyuria can occur with

: A - Renal tuberculosis . B- Anaerobes

C - Mycoplasma . D - All of the above .

6- The most common cause of a urinary tract infection (UTI) is :

A - Escherichia coli (E. coli)

B- Staphylococcus aureus (S. aureus)

C- Chlamydia .

D - Mycoplasma .

7- Urine cultures are specially indicated in the following situations :

A - Complicated UTI including pyelonephritis .

B- Transplant and diabetic patients .

C - Pregnancy .

D- All of the above .

8- Bacterial count 100.000 bacteria per ml of urine or more :

A- Indicates UTL B- Regarded as contamination .

C- Is of no significance .

9- Bacterial count less than 10.000 bacteria per ml of urine :

A- Indicates UTI . B- Regarded as contamination .

C- Is of no significance .

10- A count of 10.000 organisms per ml of urine is considered significant if:

A- The organism is gram positive and only one type .

B- The organism is gram positive and many types ,

C- The organism is gram negative and many types .

11- Antibiotic sensitivity test is especially indicated in case of :

A - Urine with significant bacteriuria , particularly from patient with recurrent UTI .

B - Complicated UTI .

C - A and B.

D- None of the above .

12- On Macconkey medium E. coli gives :

A - Metallic green colonies .

B - Rose pink colonies .

C - Pale colonies .

D- None of the above .

13 - On EMB E. Coli gives :

A - Metallic green colonies . B- Pink colonies .

C - Pale colonies . D- None of the above .

14- On triple sugar iron (TSI) E. coli gives :

A - Yellow slant and yellow butt .

B- Yellow slant and red burt .

C - Red slant and red butt .

D- None of the above .

15- E. coli gives the following IMVC reaction result :

A - (++ --) B - (- ++) .

C - (+ - + -) . D - (++++) .

16 - On Macconkey medium proteus gives :

A- Metallic green colonies . B- Rose pink colonies .

C - Pale colonies . D- None of the above .

17- On nutrient agar proteus gives :

A- Colonies that grow and produce swarming cover all plate

B- Rose pink colonies .

C - Pale colonies .

D- None of the above .

18- Proteus gives positive :

A - Urease test . B - H2S production test .

C - A and B. D- None of the above ,

19- On triple sugar iron (TSI) proteus gives

: A- Yellow slant and yellow butt .

B- Yellow slant and red butt .

C- Red slant and black butt .

D- None of the above .

20- The following bacteria can grow on bile esculin azide :

A- Enterococci B- Staphylococcus aureus.

C- Chlamydia . D- None of the above .

21- On bile esculin azide enterococci gives :

A- Black colonies . B - Rose pink colonies .

C - Pale colonies . D- None of the above .

22- Candida species can grow on the following media :

A - Nutrient agar B - Com meal agar

C- Sabaroud dextrose agar D- All of the above .

23 - On Sabaroud dextrose agar C. albicans gives :

A - Large , cream colored colonies with yeasty odour

B- Black colonies .

C - pink colonics

D- None of the above .

24- The following test (s) can be used to confirm diagnosis of c . albicans :

A - Germ tube test . B - Chlamydospore formation test
C - A and B D- None of the above .

25- A 21 year newly married woman developed a urinary tract infection (UTI) . At the time she sought medical advice , she was febrile and complained of painful urination and flank pain . Her urine appeared " cloudy " . Urine culture yields a lactose - fermenting , indole - positive , Gram negative bacillus .

The infectiveness of the organism responsible for this urinary tract infection is associated with specific ?

A - exotoxins B - K antigens

c - Metabolic properties d - P fimbriae

e . Plasmids

26- A 45 - year - old woman presents to the emergency department with intense pain in her lower back and a burning sensation upon urination . A urine culture was taken and plated on MacConkey agar . Gram - negative rods that did not ferment lactose were identified .

Which virulence factor of the causal agent is most important to pathogenesis ?

A- Exotoxin B- Urease .

C- Capsule . D- Catalase .

27- Which is a common UTI risk factor in adults ?

A- Enlarged prostate B- Catheter usage

C- Diabetes D- All of the above

28- What are signs and symptoms of a UTI in adults ?

A- Frequent urge to urinate B- Pain during urination

C- Milky / cloudy urine . D- All of the above

29- Bacteria from the intestines (most commonly) often infect the urinary tract by ascending from the perineal area into the lower urinary tract .

A- Escherichia coli B - Bacillus anthracis

C - Staphyloccus aureus D- Streptococcus pyogenes , Group A

30- Infections are among the most common urinary tract infections . (multiple response)

A- Urethritis B- Prostatitis

C - Cystitis D- Nosocomial (hospital acquired)

Ansewrs
