RESPIRATORY SYSTEM MCQs

Choose the correct answer:

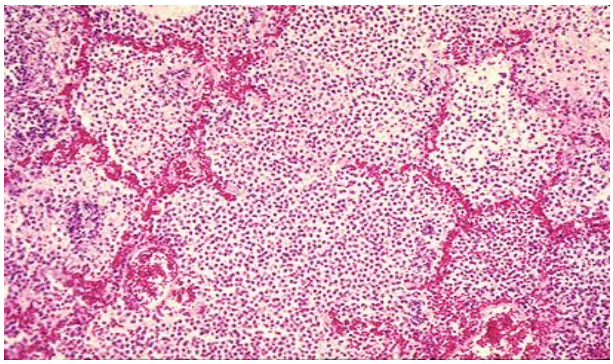

1. **Bronchopneumonia is defined as……..**
   - **A.** Acute serous inflammation.
   - **B.** Granulomatous inflammation.
   - **C.** Acute membranous inflammation.
   - D. Chronic non specific inflammation.
   - E. Acute suppurative inflammation.

2. **In lobar pneumonia, inflammatory cells and RBCs filled the alveolar spaces and this is called.**
   - **A.** Red hepatization.
   - **B.** Congestion.
   - **C.** Abscess formation.
   - D. Gray hepatization.
   - E. Granulomatous lesion.

……

3. **In lobar pneumonia, the alveolar spaces are filled with RBCs is called….**
   - **A.** Red hepatization.
   - **B.** Congestion.
   - **C.** Abscess formation
   - D. Gray hepatization.
   - E. Granulomatous lesion.

……

4. **Inflammation in lobar pneumonia is called…**
   - **A.** Acute serous inflammation.
   - **B.** Acute hemorrhagic inflammation.
   - D. Acute membranous inflammation.
   - **E.** Acute fibrinous inflammation.

C. Acute suppurative inflammation.

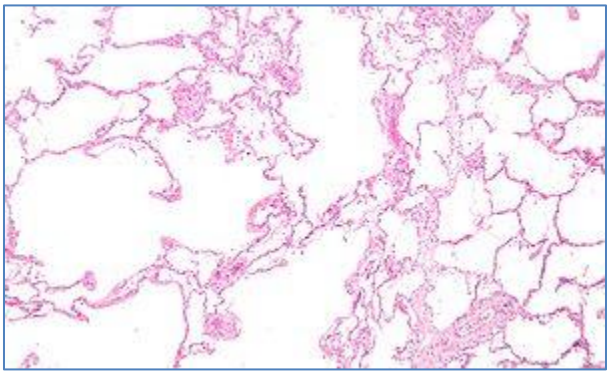

5. **In viral pneumonia, inflammatory cells infiltration is mainly in .....**
   A. Bronchial lumen.
   B. Alveolar wall.
   C. Interstitial tissue.
   D. Alveolar lumen.
   E. Bronchiolar wall.

6. **Lung abscess is a complication of.....**
   A. Bronchial asthma.
   B. Bronchopneumonia.
   C. Interstitial pneumonia.
   D. Chronic bronchitis.
   E. Emphysema.

7. **Bronchiectasis is characterized histologically by.....**
   A. Acute inflammatory cells and RBCs filling the alveolar lumina.
   B. Chronic inflammation in the interstitial tissue of the lung.
   C. Acute suppurative inflammation & formation of a cavity filled with pus.
   D. Overdistension of the lung with destruction of the alveolar wall.
   E. Permanent dilatation of the bronchioles with suppurative inflammation

   .....

8. **Emphysema is caused by.....**

   A. α- 1 Antitrypsin deficiency.
   B. Loss of the elastic recoil of the lung.
   C. Chronic interstitial inflammation.
   D. Hyperreactive bronchi and bronchioles.
   E. Acute fibrinous inflammation.

   .....

9. **In bronchial asthma there is.....**
   A. α- 1 Antitrypsin deficiency with alveolar wall destruction.
   B. Loss of the elastic recoil of the lung with fibrosis.
   C. Chronic interstitial inflammation & consolidation.

D. Hyperreactive bronchi and bronchioles with ↑mucus secretion.
E. Acute fibrinous inflammation with consolidation.

……..

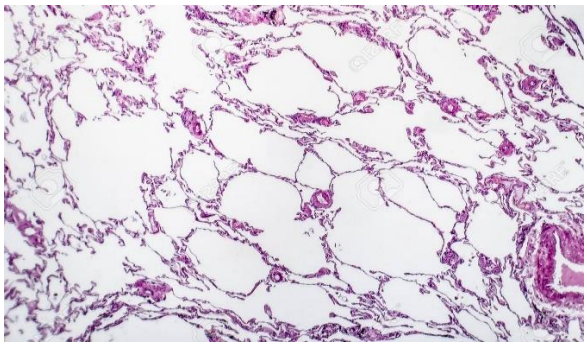

10. A 21-years-old man complained of nasal obstruction and discharges for 2 weeks. A clinical examination showed a small polyp about 1x2cm, white, soft, obstructing the nasal cavity. Excisional biopsy was done and histopathological examination revealed:

A. Few granulomas with Mikulicz cells, Russel bodies and lymphocytes.
B. Few caseating granulomas with epithelioid cells and lymphocytes.
C. Chronic inflammatory cells, in an edematous stroma.
D. Few papillary processes, covered by transitional epithelium.
E. Lobules of squamous epithelium in the subepithelial stroma.

……

11. A 49-years-old heavy smoker, driver complained of cough, wheezing and dyspnea for 3 weeks. On physical examination there was mild cyanosis, weak heart sounds and overdistended both lungs. X-ray showed hyperinflation of both lung that encroached on the heart. What are the diagnostic features on lung biopsy of this case?

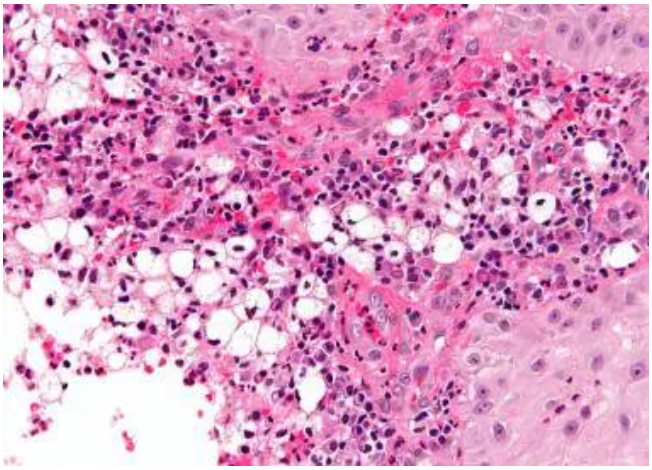

A. Dense acute inflammatory cells and RBCs filling the alveolar lumen.
B. Overdistended alveoli with rupture & compression of alveolar wall.

C. Dilated bronchioles with inflammation and destruction of its wall.
D. Chronic inflammatory cell infiltration in the interstitial lung tissue.
E. Dilated bronchi with chronic inflammatory cells and mucus glands hyperplasia.

.....

12. A 21-years-old female complained of nasal obstruction and offensive discharge for 4 days. On physical examination there were few crustation and friable mass in the nasal cavity A biopsy from the crusts revealed few foamy cells with pyknotic nuclei and foamy pale cytoplasm, plasma cells, lymphocytes and edema in a fibro-vascular tissue stroma. What is the diagnosis?

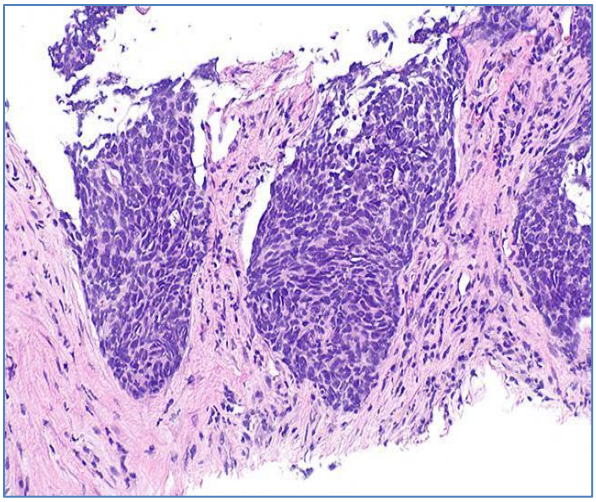

A. Tuberculosis.
B. Chronic non-specific rhinitis.
C. Sarcoidosis.
D. Leprosy.
E. Rhinoscleroma.

13. What is the characteristic cell in this lesion?

A. Reed-Sternberg cell.
B. Mikulicz cell.
C. Heart failure cell.
D. Lacunar cell.
E. Langhan's cell.

.....

14. A 73-years-old man complained of cough and hemoptysis for 3 weeks. He had a long history of smoking. X-ray chest showed a central mass in the main bronchi about 3x4cm, with enlarged hilar LN. A biopsy from the mass revealed a tumor formed of small round neoplastic cells with round hyperchromatic nuclei and scanty pale cytoplasm, arranged in nesting pattern, with areas of necrosis and mitosis. What is the diagnosis of this case?

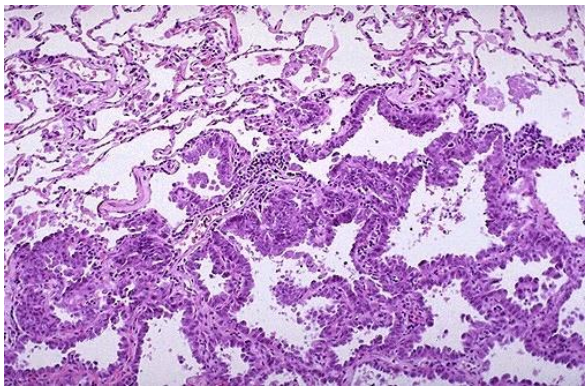

A. Squamous cell carcinoma.
B. Large cell carcinoma.
C. Carcinoid tumor.
D. Small cell carcinoma.
E. Adenocarcinoma.

15. What is the tumor marker that confirm the diagnosis?

A. Chromogranin and synaptophysin.
B. Cytokeratin and CEA.
C. CD2-3 and CD20.
D. Vimentin and Desmin.
E. α-fetoprotein.

……

16. A 67-years-old woman complained of dyspnea, chest pain and dry cough for 3 weeks. X-ray showed a small mass 4x3cm, at the periphery of the Lt lower lobe of the lung with hemorrhagic pleural effusion. A biopsy from the mass showed neoplastic epithelial cells, lining the alveolar walls. What is the diagnosis?

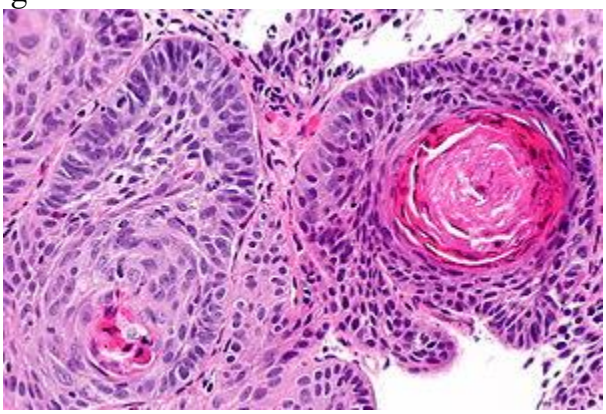

A. Squamous cell carcinoma.
B. Large cell carcinoma.
C. Adenocarcinoma.
D. Carcinoid tumor.
E. Small cell carcinoma.

……

17. A 76-years-old man complained of dyspnea and productive cough with hemoptysis for 2 months. X ray chest showed a central large soft tissue mass

in the Rt main bronchus 5x6 cm, with enlarged hilar LN. A biopsy from the mass showed cell nests and solid sheets of neoplastic epithelial cells, in a fibrous tissue stroma. What is the diagnosis?

A. Squamous cell carcinoma.
B. Large cell carcinoma.
C. Carcinoid tumor.
D. Adenocarcinoma.
E. Small cell carcinoma.

18. What is the cause of enlargement of the hilar lymph nodes?

A. Acute lymphadenitis.
B. Chronic non specific lymphadenitis.
C. Metastasis to the LN.
D. Tuberculous lymphadenitis.
E. Reactive hyperplasia of LN.

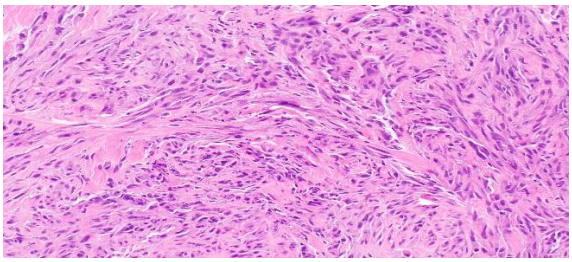

……

19. In small cell carcinoma of the lung, patients may present with myasthenia gravis or clupping of fingers. This unusual presentation is called….

A. Cushing syndrome.
B. Paraneoplastic syndrome.
C. Conn syndrome.
D. Peripheral neuritis.
E. Addison syndrome.

……

20. A 66-years-female complained of dyspnea for 3 years. She has a long history of working in Asbestos factory till retirement. X-ray chest showed pleural effusion and pleural thickening. A biopsy from the thickened pleura showed nests and acini formed of neoplastic epithelial cells in a atypical spindle cell stroma. What is the diagnosis?

A. Squamous cell carcinoma.
B. Adenocarcinoma.
D. Mesothelioma.
E. Fibrosarcoma.

C. Metastatic carcinoma.

……

Match the Rt column word with the related sentence in the Lt column

21. Lobar pneumonia.	A. A lung cavity filled with pus.
22. Bronchopneumonia.	B. Acute fibrinous inflammation.
23. Bronchiectasis.	C. Bronchial obstruction with inflammation
24. Emphysema.	D. Overdistension of the lung with destruction.
	E. Acute suppurative inflammation.

……

25. Small cell carcinoma.	A. Epithelial and mesenchymal tumor.
26. Adenocarcinoma.	B. Paraneoplastic syndrome.
27. Squamous cell carcinoma.	C. Bronchioloalveolar carcinoma.
	D. Cell nest.
	E. Lung collapse.

……..

Model answer:

1-E	10-C	19-B
2-D	11-B	20-D
3-A	12-E	21-B
4-E	13-B	22-E
5-C	14-D	23-C
6-B	15-A	24-D
7-E	16-C	25-B
8-A	17-A	26-C
9-D	18-C	27-D

……..
