FINAL 30

1- A structure formed 5 days after conception with a distinctive outer and inner layer is called?

A- A blastocyst

B- A zygote

C- An embryo

D- A mesoderm

E- A chorion

2- Which type of cartilage is found in the larynx?

A- Hyaline cartilage

B- Elastic cartilage

C- Fibrocartilage

D- Both a & b

E- Both a & c

3- Regarding chondrocyte which of the following is true?

A- Protein secreting cell

B- Found inside lacuna

C- Found in the perichondrium

D- Both a & b

E- Multinucleated

4- All chromosomes other than 'sex' chromosome are called?

A- Autosomes

B- Acentric chromosomes

C- Metacentric chromosomes

D- Telocentric chromosomes

E- None of the above

5- Lymph vessels are present in all tissues and organs of the body EXCEPT?

A- Central nervous system

B- Eyeball

C- Teeth

D- Lymph nodes

E- Bone marrow

6- The ..... contain no lymphoid tissue?

A- Tonsils

B- Spleen

C- Kidneys

D- Lymph nodes

E- Cartilage

7- Following arteries are tortuous EXCEPT?

A- Facial

B- Lingual

C- Uterine

D- Splenic

E- Common carotid

8- In comparison to the arteries, the veins?

A- Have thicker walls

B- Have narrower lumen

C- Contain no valves

D- Deeper than the arteries

E- Carry poorly oxygenated blood except the pulmonary ones

9- The liver is related to the?

A- Pulmonary circulation

B- Systemic circulation

C- Portal system

D- Both B & C

E- Both A & C

10- Followings are sites of superficial fascia devoid of adipose tissue?

A- Eyelids

B- Gluteal region

C- Penis

D- Scrotum

E- Clitoris

11- Some synovial joints don't have?

A- Articular cartilage

B- Intra-articular ligaments

C- Synovial membrane

D- Fibrous capsule

E- Synovial fluid

12-The ..... joints are synovial joints allowing for gliding movement only?

A- Plane

B- Saddle

C- Hinge

D- Pivot

E- Ball and socket

13-The ..... joints are uniaxial synovial joints allowing flexion and extension only?

A- Saddle

B- Ellipsoid

C- Hinge

D- Pivot

E- Ball and socket

14-The ..... muscle must be relaxed during the movement?

A- Prime mover

B- Antagonist

C- Synergist

D- Fixator

15-The ..... muscle is the main muscle for a movement?

A- Prime mover

B- Synergist

C- Antagonist

D- Fixator

16-The ..... joints are polyaxial synovial joints allowing flexion, extension, abduction, adduction, medial and lateral rotation?

A- Saddle

B- Ellipsoid

C- Condyloid

D- Ball and socket

E- Hinge

17-The ..... are thickened bands of deep fascia around the wrist and ankle joints?

A- Ligaments

B- Aponeuroses

C- Retinacula

D- Bursae

E- Sheath

18-The ..... are closed fibrous sacs lined with synovial membrane and contain synovial fluid?

A- Bursae

B- Aponeuroses

C- Retinacula

D- Interosseous membrane

E- Sheath

19-Parasympathetic nervous system?

A- Increases blood pressure

B- Increases motility of gastrointestinal tract

C- Decreases respiratory secretions

D- Increases heart rate

20-The axial skeleton includes all of the following EXCEPT?

A- Skull

B- Humerus

C- Vertebral column

D- Sternum

E- Ribs

21-The ..... is a hollow or bony depression?

A- Condyle

B- Epicondyle

C- Fossa

D- Groove

E- Crest

22-The cervical segments of spinal cord are ..... in number?

A- 8

B- 7

C- 6

D- 5

E- 4

23-The cervical vertebrae are ..... in number?

A- 8

B- 7

C- 6

D- 5

E- 4

24-Followings are parts of male urethra EXCEPT?

A- Fundus

B- Membranous

C- Preprostatic

D- Penile

E- Prostatic

25-Base of the heart is formed of the following EXCEPT?

A- Left atrium

B- Small part of right atrium

C- Proximal part of S.V.C

D- Proximal part of I.V.C

E- Distal parts of pulmonary veins

26-The ..... plane divides the body into anterior and posterior parts?

A- Sagittal

B- Coronal

C- Parasagittal

D- Transverse

E- Horizontal

27-The ..... muscle is related to the skin and hair sheath?

A- Fusiform

B- Arrector pili

C- Pennate

D- Triangular

E- Strap

28-Parasympathetic nervous system is ..... in origin?

A- Craniosacral

B- Cervical

C- Thoracolumbar

D- Sacral

E- Coccygeal

29-..... is synonymous to secondary cartilaginous joint?

A- Gomphosis

B- Synchondrosis

C- Symphysis

D- Syndesmosis

E- Suture

30-Regarding differences between right and left lungs, the following are true EXCEPT?

A- Right lung is shorter, wider, larger and heavier

B- Right lung consists of 3 lobes while the left lung consists only of 2 lobes

C- Right lung has 2 fissures while the left has only one fissure

D- Base is more concave in the right lung

E- Anterior border is notched in right lung

31-Regarding the pharynx, the following are true EXCEPT?

A- 12 cm length

B- Begins from base of skull

C- Ends at the 6th cervical vertebra

D- Continues as larynx

E- Its parts are nasopharynx, oropharynx and laryngopharynx

32-In bones, the ..... is richly supplied by sensory nerves?

A- Epiphysis

B- Diaphysis

C- Metaphysis

D- Periosteum

E- Articular cartilage

33-Following glands are associated with the digestive system EXCEPT?

A- Salivary glands

B- Liver

C- Thyroid

D- Pancreas

E- Gall bladder

34-Superficial fascia contains the following EXCEPT?

A- Blood vessels

B- Nerves

C- Fat

D- Muscles (platysma)

E- Tendons

35-Superficial fascia contains the following EXCEPT?

A- Lymph vessels

B- Thymus gland

C- Fibrous tissue

D- Mammary gland

E- Lymph nodes

36-Regarding sympathetic nervous system, the following are true EXCEPT?

A- Increases heart rate

B- Produces bronchodilatation

C- Decreases gastrointestinal tract secretions

D- Produces sweat secretion

E- None of the above

37-..... muscle; its fibers come from one side of a tendon?

A- Fusiform

B- Strap

C- Unipennate

D- Multipennate

E- Bipennate

38-Following are end arteries EXCEPT?

A- Coronary

B- Splenic

C- Central artery of the retina

D- Uterine

E- Renal

39-Regarding the kidney, the following are true EXCEPT?

A- Related to muscles of posterior abdominal wall

B- Lies in lower part of abdomen

C- Filters urine from the blood

D- Has cortex, medulla and sinus

E- Its size is 11 × 6 × 3 cm

40-Too abnormally long umbilical cord may lead to?

A- Early detachment of the placenta during delivery

B- Placenta previa

C- Placenta fenestrate

D- True knot

E- Placenta velamentosa

41-After birth, the left umbilical vein forms the?

A- Median umbilical ligament

B- Ligamentum teres of the liver

C- Lateral umbilical ligament

D- Ligamentum arteriosum

E- Ligamentum venosum of the liver

42-Constituents of the umbilical cord include the following EXCEPT?

A- Allantois

B- 2 umbilical arteries

C- Wharton's jelly

D- Chorionic vessels

E- One umbilical vein

43-Heuser's membrane is related to the?

A- Primary yolk sac

B- Secondary yolk sac

C- Amniotic cavity

D- Intraembryonic cavity

E- Definitive yolk sac

44-Decidual reaction includes the following changes EXCEPT?

A- Stroma cells are now decidua cells

B- Endometrium becomes thicker

C- More arteriovenous shunts

D- Placenta begins to develop

45-Initially in pregnancy, the placental barrier consists of the following EXCEPT?

A- Cytotrophoblast

B- Intermediate mesoderm

C- Connective tissue in villous core

D- Endothelial lining of fetal blood vessels

E- Syncytiotrophoblast

46-When the placenta is fixed to the myometrium, it's called?

A- Placenta membranacea

B- Accessory placenta

C- Lobed placenta

D- Placenta accreta

E- Placenta circumvallata

47-Menstrual blood consists of the following EXCEPT?

A- Venous blood

B- Secretions of the endometrial glands

C- Shedded endometrium except the basilar part

D- Cervical mucosa

E- Arterial blood

48-Fetal part of the placenta is formed by the?

A- Decidua basalis

B- Chorion leave

C- Chorion frondosum

D- Decidua parietalis

E- Decidua capsularis

49-Functions of the placenta include all of the following EXCEPT?

A- Transmission of IgG from the 14th week

B- Gas exchange

C- Secretion of HCG in the first 2 months

D- Nutrition: water, salts, carbohydrates, fats, proteins and vitamins

E- Maintenance of constant fetal body temperature

50-Regarding the placenta, the following are true EXCEPT?

A- Circular of 15–25 cm diameter

B- 3 cm thickness

C- 300–600 gm weight

D- Its maternal surface is smooth and shiny

E- Its maternal side is formed of 15–20 cotyledons

51-Chorion (the wall of chorionic vesicle) consists of the following layers EXCEPT?

A- Syncytiotrophoblast

B- Cytotrophoblast

C- Extraembryonic mesoderm

D- Decidua parietalis

E- Decidua basalis

52-..... forms the floor of the amniotic cavity?

A- Endoderm

B- Ectoderm

C- Mesoderm

D- Trophoblast

E- Decidua

53-Following are ectodermal in origin EXCEPT?

A- Epidermis of skin

B- Nails

C- Bones

D- Epithelium of the lower part of anal canal

E- Muscles of the iris

54-Following are endodermal in origin EXCEPT?

A- Pancreas

B- Thyroid gland

C- Epithelium of nasal cavity

D- Connective tissue

E- Parathyroid glands

55-Following are ectodermal in origin EXCEPT?

A- Spinal cord

B- Sweat glands

C- Epithelium of stomach

D- Cortex of suprarenal gland

E- Mammary gland

56-Following are mesodermal in origin EXCEPT?

A- Heart

B- Pituitary gland

C- Skeletal muscles

D- Muscles of gastrointestinal tract

E- Cartilage

57-Following are endodermal in origin EXCEPT?

A- Testis

B- Epithelium of respiratory system

C- Parenchyma of thymus gland

D- Hepatocytes

E- Epithelium of the greater part of the urinary system

58-Following events occur in the 3rd week EXCEPT?

A- Gastrulation

B- Notochord formation

C- Folding

D- Future development of trophoblast

E- Growth of germ disc

59-In relation to the dizygotic twins, the following are true EXCEPT?

A- Two ova are ovulated at the same time

B- Each ovum is fertilized by a separate sperm

C- Have separate placentae, amnions and chorions

D- May lead to conjoined twins

E- More common than the monozygotic twins

60-Septum transversum shares in formation of the following EXCEPT?

A- Serous pericardium

B- Fibrous pericardium

C- Diaphragm

D- Liver

E- None of the above

61-Allantois is an extension from ..... into the connecting stalk?

A- Primary yolk sac

B- Secondary yolk sac

C- Amniotic cavity

D- Intraembryonic cavity

E- None of the above

62-Para-axial mesoderm gives the following derivatives EXCEPT?

A- Dermis of the skin

B- Vertebral column

C- Visceral muscles

D- Skeletal muscles

E- None of the above

63-Cardiogenic area is part of ..... mesoderm?

A- Para-axial

B- Intermediate

C- Somatopleuric

D- Splanchnopleuric

E- All of the above

64-In menstrual cycle, ... stage is under effect of estrogen secreted by Graafian follicle?

A- Menstrual flow

B- Proliferative

C- Secretory

D- Premenstrual

E- None of the above

65-Following are parts of uterine tube EXCEPT?

A- Infundibulum

B- Cervix

C- Ampulla

D- Isthmus

E- Intramural

66-Intra-embryonic mesoderm separates ectoderm from endoderm EXCEPT in region of?

A- Cloacal membrane

B- Buccopharyngeal membrane

C- Septum transversum

D- Both A and B

E- Both B and C

67-Folding leads to formation of the following EXCEPT?

A- Definitive yolk sac

B- Gastrointestinal tract and its mesenteries

C- Umbilical orifice and umbilical cord

D- All of the above

E- None of the above

68-Margins of the neural plate are called?

A- Neural crests

B- Neural folds

C- Neuropores

D- Neural membranes

E- None of the above

69-..... mesoderm is divided into 42–44 mesodermal somites on each side?

A- Para-axial

B- Intermediate

C- Somatopleuric

D- Splanchnopleuric

E- None of the above

70-In oogenesis, the second meiotic division is completed at the time of?

A- Ovulation

B- Fertilization

C- Luteinization

D- Implantation

E- Cleavage

71-During formation of the notochord, ... appears as a temporary connection between the yolk sac and amniotic cavity?

A- Primitive pit

B- Notochordal canal

C- Neurenteric canal

D- Extra-embryonic cavity

E- Celomic cavity

72-During implantation, the ..... secretes HCG that maintains corpus luteum?

A- Trophoblast

B- Epiblast

C- Inner cell mass

D- Amniogenic cells

E- Hypoblast

73-Mechanisms of folding include enlargement of the?

A- Amniotic cavity

B- Yolk sac

C- Extra-embryonic cavity

D- Intra-embryonic cavity

E- All of the above

74-Regarding fertilization, the following are true EXCEPT?

A- Leads to restoration of the diploid number of chromosomes

B- Penetration of corona radiata is facilitated by hyaluronidase enzyme

C- Vitelline membrane prevents penetration by more than one sperm

D- 2nd meiotic division is completed with penetration of vitelline membrane

E- Initiation of cleavage

75-In anatomical position, the upper limbs are adducted?

A- True

B- False

76-Intervertebral discs are of the synchondrosis joints?

A- True

B- False

77-Coronary arteries are tortuous arteries?

A- True

B- False

78-Coccygeal vertebrae are 4 in number?

A- True

B- False

79-Cranial nerves are 10 pairs?

A- True

B- False

80-Oligohydramnios means amniotic fluid is less than one liter?

A- True

B- False

81-Gastrulation means formation of the three germ layers?

A- True

B- False

82-Decidua capsularis covers the placenta?

A- True

B- False

83-notochordal plate is prat of the endoderm?

A- true

B- false

84-Embryonic period is the period of organogenesis

A- true

B- false

85-Primary cartilaginous joint

A- Joint between epiphyses and diaphysis of long bones.

B- Joint between bodies of the vertebrae.

C- Suture of the skull.

D- Gomphosis

E- Shoulder joint.

86-Secondary cartilaginous joint

A- Joint between epiphyses and diaphysis of long bones.

B- Joint between bodies of the vertebrae.

C- Suture of the skull.

D- Gomphosis

E- Shoulder joint.

87-Fibrous joint

A- Joint between epiphyses and diaphysis of long bones.

B- Joint between bodies of the vertebrae.

C- Suture of the skull.

D- Gomphosis

E- Shoulder joint.

88-Synovial joint

A- Joint between epiphyses and diaphysis of long bones.

B- Joint between bodies of the vertebrae.

C- Suture of the skull.

D- Gomphosis

E- Shoulder joint.

89-Short bone

A- Tarsal.

B- Femur.

C- Paranasal sinuses.

D- Scapula.

90-Long bone

A- Tarsal.

B- Femur.

C- Paranasal sinuses.

D- Scapula.

91-Pneumatic bone

A- Tarsal.

B- Femur.

C- Paranasal sinuses.

D- Scapula.

92-Flat bone

A- Tarsal.

B- Femur.

C- Paranasal sinuses.

D- Scapula.

93-DiGeorge

A- Deletion of small segment of chromosome 22.

B- Presence of extra X chromosome in male (47 XXY).

C- Presence of a third copy of chromosome 21.

D- Loss of an X chromosome in a female.

94-Klinefelter

A- Deletion of small segment of chromosome 22.

B- Presence of extra X chromosome in male (47 XXY).

C- Presence of a third copy of chromosome 21.

D- Loss of an X chromosome in a female.

95-Down

A- Deletion of small segment of chromosome 22.

B- Presence of extra X chromosome in male (47 XXY).

C- Presence of a third copy of chromosome 21.

D- Loss of an X chromosome in a female.

96-Turner

A- Deletion of small segment of chromosome 22.

B- Presence of extra X chromosome in male (47 XXY).

C- Presence of a third copy of chromosome 21.

D- Loss of an X chromosome in a female.

97-Ovary

A- Primary sex organ.

B- Site of fertilization.

C- Site of implantation.

D- Site of insemination.

98-Uterine tube

A- Primary sex organ.

B- Site of fertilization.

C- Site of implantation.

D- Site of insemination.

99-Uterus

A- Primary sex organ.

B- Site of fertilization.

C- Site of implantation.

D- Site of insemination.

100- Vagina

A- Primary sex organ.

B- Site of fertilization.

C- Site of implantation.

D- Site of insemination.

قال عمر بن الخطاب رضي الله عنه :

"إنَّ الذي تشتهي نفسه المعاصي ويتركها لله -عزَّ وجلَّ- من الذين امتحن الله قلوبهم للتقوى لهم مغفرةٌ وأجرٌ عظيمٌ".

MID 31

1- Which plane of section would divide the body into anterior and posterior portions?

A- Horizontal

B- Coronal

C- Sagittal

D- Parasagittal

E- Medial

2- Mrs. Smith has itching on her shoulder. She reaches her right hand over to her shoulder to "scratch that itch." Which movement is occurring at her ELBOW joint?

A- Extension

B- Flexion

C- Circumduction

D- Supination

E- Pronation

3- Which of the following is NOT a part of the axial skeleton?

A- Sternum

B- Vertebral column

C- Scapula

D- Skull

E- Ribs

4- The shoulder and hip joints are of this type?

A- ball-and-socket

B- pivot

C- Saddle

D- gliding

E- Hinge

5- Where is a fixed (immovable) joint located?

A- Hip

B- Knee

C- Skull

D- Finger

E- Shoulder

6- The correct term for the end of a bone is?

A- The terminal ileum

B- The epiphysis

C- The diaphysis

D- The xiphoid

E- Epiphyseal plate

7- Contractile cells of tissues are called?

A- Muscle fibers

B- Muscle tissues

C- Muscle protein

D- Muscle contraction

E- None of the above

8- A cord or strap of dense tissue that connects a muscle to bone is called?

A- tendon

B- ligament

C- bursa

D- arthritis

E- aponeurosis

9- Which of the following joint classifications is the most moveable listed (synovial)?

A- diarthrosis

B- synarthrosis

C- amphiarthrosis

D- symphyses

E- Synchondrosis

10- The layer of the body just under (or deep to) the skin is called?

A- deep fascia

B- epimysium

C- an aponeurosis

D- superficial fascia

E- epineurium

11- All are true about the deep fascia EXCEPT?

A- It is a thin membrane located deep to the superficial fascia

B- It is absent in the abdomen

C- It is an inelastic sheath for the muscles

D- It is thin in the palm of the hand

E- More mobile

12- What happens to the trachea, before it reaches the lungs?

A- It branches in two directions

B- It branches in three directions

C- It vibrates and creates sounds

D- It closes up so that no oxygen can escape

E- None of the above

13- A structure above over the trachea that keeps out food and anything else that could enter the trachea?

A- Larynx

B- Nasopharynx

C- Oropharynx

D- Laryngopharynx

E- Bronchus

14- As you breathe, this contracts and flattens to give your lungs room to fill up with air?

A- Larynx

B- Diaphragm

C- Lung balloon

D- Bronchiole

E- Trachea

15- Protective functions of the skin include all of the following EXCEPT protection?

A- against water loss

B- against infections

C- against harmful chemicals

D- of the joints

E- against temperature change

16- What are the two structural divisions of the nervous system?

A- Sympathetic and parasympathetic

B- motor and sensory

C- Central and functional

D- Central and peripheral

E- now of the above

17- Each spinal segment gives rise to?

A- Four spinal nerves

B- Three spinal nerves

C- Two spinal nerves

D- Five spinal nerves

E- One spinal nerve

18-Neurons come in which different type(s)?

A- Sensory

B- Motor

C- Skeletal

D- A and B

E- B and C

19-System of motor pathways which is responsible for voluntary and conscious actions is classified as?

A- Autonomic nervous system

B- Somatic nervous system

C- Reflexive nervous system

D- Ventral nervous system

E- Peripheral nervous system

20-Which of the following is NOT considered a part of the male urethra?

A- Prostatic

B- Membranous

C- Vasapore

D- Sponge

E- A and B

21-The kidneys lie at?

A- The anterior abdominal wall

B- The posterior abdominal wall

C- Anterior thoracic wall

D- Posterior thoracic wall

E- Superior mediastinum

22-Muscles which have two rows of muscle fibres, facing in opposite diagonal directions, with a central tendon are called?

A- Unipennate muscles

B- Bipennate muscles

C- Multipennate muscles

D- Fusiform

E- A, B, and C

23-Name the site of sperm maturation?

A- Epididymis

B- Ductus deferens

C- Spermatic cord

D- Urethra

E- Seminal vesicle

24-Out of the following, which hormone is NOT secreted in luteal phase?

A- Estrogen

B- Progesterone

C- A and B

D- Chorionic gonadotrophins

E- None of the above

25-In the absence of acrosome the sperm?

A- Cannot penetrate the egg

B- Cannot get energy

C- Cannot get food

D- Cannot swim

E- Cannot move

26-Which one of the followings regarding 'Estrogen' is correct?

A- Causes the endometrium to rebuild

B- Has no effect on the Wolffian duct

C- Maintains the secondary sexual characteristics in female

D- All of these

E- A and B

27-Vasa efferentia (efferent ductules) are the ductules leading from?

A- Epididymis to urethra

B- Testicular lobules to rete testis

C- Rete testis to epididymis

D- Vas deferens to epididymis

E- Epididymis to vas

28-The coronary sinus?

A- Has oxygenated blood from the heart itself

B- Opens in right atrium

C- Opens in aorta

D- Has non oxygenated blood from I.V.C

E- Has non oxygenated blood from pulmonary veins

29-Ovulation takes place?

A- In the center of the ovary

B- Through the cortex of the ovary

C- In the medulla of the ovary

D- In the uterine tube

E- In the uterus

30-Morula reaches the uterus after?

A- 2 hours after fertilization

B- 3 days after fertilization

C- 2 weeks after fertilization

D- It does not reach the uterus

E- A and B

31-When does neuralation occur?

A- 1st week

B- 2nd week

C- 3rd week

D- 4th week

E- 7th day

32-Arrange events that occur in gastrulation?

A- Primitive node → primitive pit → primitive streak → primitive groove

B- Primitive pit → primitive streak → primitive groove → primitive node

C- Primitive streak → primitive groove → primitive node → primitive pit

D- Primitive node → primitive pit → primitive groove → primitive streak

E- A and B

33-All of the following occur due to folding EXCEPT?

A- Buccopharyngeal membrane became cranial to the pericardial cavity

B- Formation of the umbilical orifice

C- Connecting stalk became caudal to the disc

D- Formation of the mid gut

E- Formation of the hind gut

34-All of the following are derivatives of mesoderm EXCEPT?

A- Cancellous bone

B- Aorta

C- Uterus

D- Brain

E- Heart

35-One of the following is derived from endoderm?

A- Pericardium

B- Kidney

C- Skin

D- Pancreas

E- Spinal cord

36-Spermatogenesis

A- Process of formation of sperm from primitive germ cell.

B- Most primitive germ cells.

C- Has 46 chromosomes.

D- Process of maturation of sperm.

E- Has 23 chromosomes.

37-Spermatogonia

A- Process of formation of sperm from primitive germ cell.

B- Most primitive germ cells.

C- Has 46 chromosomes.

D- Process of maturation of sperm.

E- Has 23 chromosomes.

38-1ry spermatocyte

A- Process of formation of sperm from primitive germ cell.

B- Most primitive germ cells.

C- Has 46 chromosomes.

D- Process of maturation of sperm.

E- Has 23 chromosomes.

39-Spermiogenesis

A- Process of formation of sperm from primitive germ cell.

B- Most primitive germ cells.

C- Has 46 chromosomes.

D- Process of maturation of sperm.

E- Has 23 chromosomes.

40-Spermatid

A- Process of formation of sperm from primitive germ cell.

B- Most primitive germ cells.

C- Has 46 chromosomes.

D- Process of maturation of sperm.

E- Has 23 chromosomes.

41-F.S.H (Follicular stimulating hormone)

A- Act on ovary in follicular phase.

B- From pituitary gland in luteal phase.

C- Act on uterus in follicular phase.

D- Secreted from corpus luteum in luteal phase.

E- Present in urine of pregnant mother.

42-L.H (Luteinizing hormone)

A- Act on ovary in follicular phase.

B- From pituitary gland in luteal phase.

C- Act on uterus in follicular phase.

D- Secreted from corpus luteum in luteal phase.

E- Present in urine of pregnant mother.

43-Oestrogen

A- Act on ovary in follicular phase.

B- From pituitary gland in luteal phase.

C- Act on uterus in follicular phase.

D- Secreted from corpus luteum in luteal phase.

E- Present in urine of pregnant mother.

44-Progesterone

A- Act on ovary in follicular phase.

B- From pituitary gland in luteal phase.

C- Act on uterus in follicular phase.

D- Secreted from corpus luteum in luteal phase.

E- Present in urine of pregnant mother.

45-Human chorionic gonadotrophins (H.C.G)

A- Act on ovary in follicular phase.

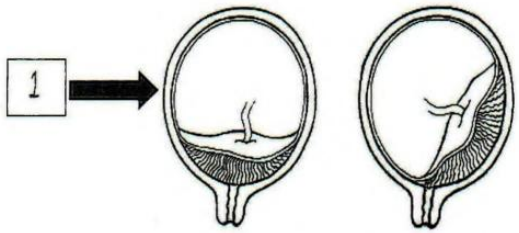

B- From pituitary gland in luteal phase.

C- Act on uterus in follicular phase.

D- Secreted from corpus luteum in luteal phase.

E- Present in urine of pregnant mother.

46-The arrow (number 1) referred to?

A- Partial placenta previa

B- Complete placenta previa

C- Ectopic pregnancy

D- Low lying placenta

E- Marginal placenta previa

47-This process is resulted from?

A- Abnormal gametogenesis

B- Abnormal fertilization

C- Abnormal implantation

D- Abnormal cleavage

E- Folding of embryo

48-This type of muscle present in?

A- Heart

B- Muscles of upper limb

C- Muscles of lower limb

D- Muscles in wall of arteries

E- Muscles of abdominal wall

Answers - MID 31

تَمْكِينُكَ لِنَفْسِكَ مِن المعاصي يَخْنُقُ القلب،

وأسرعُ سهام إبليس الذي يخترق به القلبَ

فيجرحهُ ويُدْمِيه هو النظر إلى الحرام .

FINAL 31

1- A cut that only goes through a layer of skin would be called?

A- Lateral

B- Superficial

C- Deep

D- Superior

E- Inferior

2- This joint has a back and forth movement like a door?

A- Ball and socket

B- Gliding

C- Hinge

D- Pivot

E- Plane

3- What does cartilage do?

A- Protects internal organs

B- Allows bones to separate

C- Allows bones to rub together

D- Secretes fluids

E- Acts as a shock absorber

4- The joint in which one part of a bone slides over another bone?

A- Ball and socket

B- Hinge

C- Pivot

D- Gliding

E- Saddle

5- A vertical plane which passes through the body from anterior to posterior dividing the body into right and left parts?

A- Sagittal

B- Coronal

C- Transverse

D- Horizontal

E- None of the above

6- This term refers to position in which human lying with the face facing upward?

A- Supine

B- Prone

C- Inferior

D- Peripheral

E- Lateral

7- What body structure protects the lungs from outside harm?

A- Cartilage

B- Tiny sacs

C- The rib cage

D- The diaphragm

E- Trachea

8- Functions of the integumentary system (skin) include all of the following EXCEPT?

A- Maintenance of body temperature

B- Synthesis of vitamin A

C- Excretion of salts and wastes

D- Proteection of underlying tissue

E- sensation

9- What type of tissue is the main component of the dermis?

A- Fatty tissue

B- Connective tissue

C- Soft tissue

D- All of the above

E- None of the above

10-Where are hair roots located within the skin?

A- In the hypodermis

B- In the epidermis

C- In the dermis

D- All of the above

E- None of the above

11-Which layer is shedded and replaced continuously?

A- Hypodermis

B- Epidermis

C- Dermis

D- All of the above

E- None of the above

12-What is the function of the nervous system?

A- Regulates the internal environment

B- Controls and organizes all body activities

C- Sends signals from one cell to the other or part of the body to another

D- All of the above

E- None of the above

13-Coordinators of central nervous system are?

A- Brain and spinal cord

B- Pituitary glands

C- Endocrine glands

D- Skin and blood vessels

E- Heart

14-System of motor pathways which is responsible for voluntary and conscious actions is classified as?

A- Autonomic nervous system

B- Somatic nervous system

C- Reflexive nervous system

D- Ventral nervous system

E- Peripheral nervous system

15-The primary sex organ is known as?

A- Regulate blood volume and composition

B- Synthesize glucose

C- Regulate blood pressure

D- Gonads

E- Uterus

16-Which of the following produces the male sex hormone?

A- Rete testis

B- Seminiferous tubule

C- Leydig cell

D- Scrotum

E- Vas deferens

17-The lytic enzyme released by sperm is?

A- Ligase

B- Acrosome

C- Androgamone

D- Hyaluronidase

E- A and B

18-Number of autosomes in human spermatogonia is?

A- 46

B- 44

C- 23

D- 22

E- 48

19-Human sperm moves with the help of?

A- Middle piece

B- Flagellum

C- Basal body

D- Nucleosome

E- Head

20-Which one of the followings is incorrectly matched regarding male reproductive organ?

A- Testes: Sperm and sex hormones are produced

B- Epididymis: Ducts where sperm mature

C- Prostate gland: Contributes fluid to semen

D- Urethra: Contributes nutrients and mucus-containing fluid to semen

E- Seminal vesicle: Provide secretion into ejaculatory duct

21-If for some reason, the vasa efferentia in the human reproductive system get blocked, the gametes will not be transported from?

A- Vagina to uterus

B- Testes to epididymis

C- Epididymis to vas deferens

D- Ovary to uterus

E- Vas deferens to ejaculatory duct

22-All of the following are true about primary cartilaginous joints EXCEPT?

A- They are called synchondrosis

B- They are permanent joints

C- they are permenant joints

D- they are found in epiphyseal plate

E- They disappear after puberty

23-About secondary cartilaginous joints, one is true?

A- They are united by hyaline cartilage

B- They are called synchondrosis

C- They are called symphysis

D- They are present where epiphysis unites with diaphysis

E- They disappear after puberty

24-All of the following about pivot type of joints are true EXCEPT?

A- Their movements are permitted in one plane

B- they are uniaxial joints

C- They are present in superior radioulnar joints

D- they are biaxial joints

E- It has rotational movement

25-One is true about saddle type of joints?

A- It is uniaxial joint

B- It is rotational joint

C- The surfaces are concavo-convex

D- Both A and B

E- Both B and C

26-Contraction of muscle to prevent unwanted movement of the prime movers (complement the action) is called?

A- Agonist

B- Antagonist

C- Synergist

D- Fixator

E- None of the above

27-All are true about venules EXCEPT?

A- They pass to the heart

B- They merge to form veins

C- They have non oxygenated blood

D- They enlarge to form S.V.C and I.V.C

E- None of the above

28-About pulmonary circulation?

A- Non oxygenated blood passes from heart via pulmonary veins

B- Oxygenated blood passes from right atrium to left atrium

C- Pulmonary artery carries non oxygenated blood from right ventricle

D- Pulmonary veins have oxygenated blood from the left atrium

E- Aorta has oxygenated blood from left ventricle

29-All are true about the larynx EXCEPT?

A- It begins at 3rd cervical vertebrae

B- It is opened in deglutition

C- It consists of cartilages

D- Its function is protection of the airway

E- The muscles come nearer to produce voice

30-About the trachea all are true EXCEPT?

A- It is deficient posteriorly

B- It lies anterior to the oesophagus

C- It consists of incomplete rings

D- it is closed it deglutition

E- It ends by dividing to two bronchi

31-The oesophagus EXCEPT?

A- Extends from the pharynx to the cardiac orifice of stomach

B- Consists of muscles

C- Lies anterior to the trachea

D- It has peristaltic movement

E- Innervated by autonomic nerves

32-The urinary system has the following functions EXCEPT?

A- Eliminates wastes from the body

B- Regulates blood volume

C- Regulates blood pressure

D- Control levels of electrolytes

E- None of the above

33-The adrenal gland lies?

A- Anterior to the kidneys

B- Posterior to the kidneys

C- Superior to the kidneys

D- Inferior to the kidneys

E- All of the above

34-The vas deferens?

A- Unites with the epididymis to form ejaculatory duct

B- Opens in the urethra

C- Unites with the seminal vesicle to form ejaculatory duct

D- Unites with seminal vesicle to form urethra

E- Unites with ejaculatory duct to form seminal vesicle

35-All the following are important functions of the lymph nodes EXCEPT?

A- They serve as sites for production of antibodies

B- They remove foreign material phagocytized by macrophages

C- They are the sites where antigens stimulate the immune system

D- Production of neutrophils, eosinophils, and basophils

E- They maintain fluid balance

36-Which system enables the body to react to changes in external and internal environment?

A- Respiratory system

B- Cardiovascular system

C- Nervous system

D- Lymphatic system

E- Urinary system

37-Spinal nerves carry?

A- Motor signals

B- Sensory signals

C- Sympathetic signals

D- Parasympathetic signals

E- All of the above

38-Sympathetic and parasympathetic nerves?

A- Always work in opposition

B- Are parts of peripheral nervous system

C- They form the same effect on muscles

D- Generally work in opposition

E- None of the above

39-Which layer is enclosed in formation of urinary bladder?

A- Caudal part of amnion

B- Cranial part of amnion

C- Caudal part of yolk sac

D- Cranial part of yolk sac

E- None of the above

40-The 4 cellular layers separating maternal and fetal blood from outside to inside?

A- Spiral artery wall, Nichbaur layer, cytotrophoblast and Hofbaur layer

B- Syncytiotrophoblast, cytotrophoblast, villi connective tissue and fetal capillary endothelium

C- Maternal lacuna, trophoblast layer, endothelial and fetal red blood cell

D- Fetal capillary endothelium, villi connective tissue, cytotrophoblast and syncytiotrophoblast

E- None of the above

41-Which of the following structures is derived from the endoderm?

A- Endothelium of blood vessels

B- Epithelium of respiratory tract

C- Excretory part of the urinary system

D- Vertebral column

E- Pituitary gland

42-The floor of the notochordal canal becomes intercalated with the underlying ectoderm and gradually disappears with part of the hypoblast resulting in?

A- The formation of a primitive pit, amniotic cavity and yolk sac

B- Communication being established between the amniotic cavity and yolk sac

C- Folding of the caudal end of the embryo

D- Thickening of Henson's node

E- Formation of notochordal canal

43-With the light microscope, the zona pellucida appears as a translucent membrane surrounding the?

A- Primary oocyte

B- Zygote

C- Morula

D- Very early blastocyst

E- All of the above are correct

44-In ectopic pregnancy?

A- The placenta over bridges the internal os of the uterus

B- Implantation is inside the uterus

C- Severe bleeding is present during vaginal delivery

D- The most common site is the uterine tube

E- All of the above

45-About decidua all are true EXCEPT?

A- It means changes in the endometrium after implantation

B- It is under effect of progesterone

C- Arterio-venous shunts develop

D- It has role in fetal nutrition

E- Changes occur in uterus at the same time of cleavage

46-Decidua parietalis?

A- Surrounds the fetus completely

B- Becomes fused with chorion

C- Shares in formation of placenta

D- Becomes fused with decidua capsularis

E- b and d

47-About mesoderm?

A- Intraembryonic mesoderm appears earlier than extraembryonic mesoderm

B- Extraembryonic mesoderm becomes split completely into somatic and visceral layers

C- The trophoblast becomes transformed into the chorion

D- The extraembryonic mesoderm is outer to trophoblast

E- b and c

48-Chorionic vesicle has the following features EXCEPT?

A- The chorionic vesicle shows blood vessels in the connecting stalk

B- It has three cavities

C- The embryo is in trilaminar germ disc

D- Vessels in yolk sac will form vitelline vessels

E- Villi share in placenta

49-About derivatives of the yolk sac all are true EXCEPT?

A- Blood cells are derived from mesoderm

B- Primordial sex cells migrate to the gonads

C- The gut is derived from the floor of the sac

D- Allantois will share in bladder formation

E- a and b

50-The amnion is formed from?

A- Endoderm

B- Ectoderm

C- Cytotrophoblast

D- a and b

E- b and c

51-What is the purpose of the chorion?

A- To protect the embryo and connect it to the maternal placenta

B- To contribute cells that form the gut in the fetus

C- To develop cells that become blood cells in the embryo

D- Respiratory part to the embryo

E- a and d

52-To brush your hair what movement is done to shoulder and elbow joints?

A- Adduction and flexion

B- Abduction and flexion

C- extension and flexion

D- Abduction and extension

E- Circumduction

53-The function of Sertoli cells is?

A- secrete hormones

B- help in ejaculation

C- develop sperms

D- provide nutrition to developing spermatozoa in the testis

E- Non of the above

54-Which of the following statements about spermiogenesis is FALSE?

A- The mitochondria form the bulk of the sperm middle piece

B- The condensed nucleus contains the haploid amount of DNA

C- The Golgi zone becomes the acrosome

D- When fully motile, sperm leaves the seminiferous tubules

E- The centriole forms the tail of the sperm

55-About placenta one answer is INCORRECT?

A- Has a foetal origin and a maternal origin

B- Its diameter is about 15-20 cm

C- Placental membrane separates maternal and foetal blood

D- Membranes thickens when placenta gets old

E- Decedua basalis is one of the main components

56-All the following about the dizygotic twins are true **EXCEPT?

A- They are binovular

B- Develop from two separate zygotes

C- Not more than brothers

D- Have separate membranes

E- Have same sex

57-Functions of amnion are, EXCEPT?

A- Allows fetal movements

B- Maintains even temperature around fetus

C- Anti-shock

D- Dilates cervix at labor

E- Main source of nutrition of fetus

58-About chorionic villi of the placenta, all are true EXCEPT?

A- They belong to chorionfrondosum

B- They are attached tochorionic plate

C- They are site of exchanging material between maternal and fetal blood

D- The mesoderm has maternal blood vessles

E- Anchoring villi are separated with spaces which have maternal blood

59-The anomaly which results from sharing chorion leaven with chorion frondosum in the placenta?

A- Velamentous placenta

B- Battledore placenta

C- Diffuse placenta

D- Placenta accreta

E- Accessory placenta

60-The umbilical cord before birth has the following structures EXCEPT?

A- Umbilical arteries

B- Umbilical vein

C- Allantois

D- Vitelline vessels

E- Wharton's jelly

61-Children born to women who were prescribed Thalidomide are known to have?

A- Congenital heart malformations

B- Reproductive cancers (cervical, vaginal)

C- Spine malformations

D- Limb reduction

E- Duodenal stenosis or atresia

62-What is a teratogen?

A- Measure of prenatal activity

B- Type of ultrasound

C- Stage of development

D- A physical deformity caused by harmful substances transmitted through the placenta

E- Any agent which can cause a birth defect or have negative effects on behavioral or cognitive outcomes

63-Arms

A- Erect

B- At the sides

C- Flat on the floor

D- Facing forward

64-Eyes

A- Erect

B- At the sides

C- Flat on the floor

D- Facing forward

65-Feet

A- Erect

B- At the sides

C- Flat on the floor

D- Facing forward

66-Body

A- Erect

B- At the sides

C- Flat on the floor

D- Facing forward

67-The ankle is

A- Superficial to the bones

B- Inferior to the knee

C- Lateral to the heartd-

D- Medial to the ears

E- Superior to the wrist

68-The nose is

A- Superficial to the bones

B- Inferior to the knee

C- Lateral to the heartd-

D- Medial to the ears

E- Superior to the wrist

69-The elbow is

A- Superficial to the bones

B- Inferior to the knee

C- Lateral to the heartd-

D- Medial to the ears

E- Superior to the wrist

70-The skin is

A- Superficial to the bones

B- Inferior to the knee

C- Lateral to the heartd-

D- Medial to the ears

E- Superior to the wrist

71-The lungs are

A- Superficial to the bones

B- Inferior to the knee

C- Lateral to the heartd-

D- Medial to the ears

E- Superior to the wrist

72-Right atrium

A- Mostly have oxygen

B- push blood through Pulmonary artery

C- Push blood through Aorta

D- Has non oxygenated blood

E- Receive pulmonary veins

73-Left atrium

A- Mostly have oxygen

B- push blood through Pulmonary artery

C- Push blood through Aorta

D- Has non oxygenated blood

E- Receive pulmonary veins

74-Right ventricle

A- Mostly have oxygen

B- push blood through Pulmonary artery

C- Push blood through Aorta

D- Has non oxygenated blood

E- Receive pulmonary veins

75-Left ventricle

A- Mostly have oxygen

B- push blood through Pulmonary artery

C- Push blood through Aorta

D- Has non oxygenated blood

E- Receive pulmonary veins

76-Arteries

A- Mostly have oxygen

B- push blood through Pulmonary artery

C- Push blood through Aorta

D- Has non oxygenated blood

E- Receive pulmonary veins

77-Division at two cell stage

A- due to partial splitting of the axial area

B- 2 separate placenta

C- due to chromosomal abnormalities

D- One common placenta

E- Same or different sex

78-Division at stage of primitive streak

A- due to partial splitting of the axial area

B- 2 separate placenta

C- due to chromosomal abnormalities

D- One common placenta

E- Same or different sex

79-Dizygotic twins

A- due to partial splitting of the axial area

B- 2 separate placenta

C- due to chromosomal abnormalities

D- One common placenta

E- Same or different sex

80-Vanishing twin

A- due to partial splitting of the axial area

B- 2 separate placenta

C- due to chromosomal abnormalities

D- One common placenta

E- Same or different sex

81-Conjoined twins

A- due to partial splitting of the axial area

B- 2 separate placenta

C- due to chromosomal abnormalities

D- One common placenta

E- Same or different sex

82-Amnion

A- Became urachus after birth

B- Became ligamentum teres

C- Became medial umbilical Ligaments

D- Dorsal to the disc

E- Ventral to the disc

83-Allantois

A- Became urachus after birth

B- Became ligamentum teres

C- Became medial umbilical Ligaments

D- Dorsal to the disc

E- Ventral to the disc

84-Yolk sac

A- Became urachus after birth

B- Became ligamentum teres

C- Became medial umbilical Ligaments

D- Dorsal to the disc

E- Ventral to the disc

85-Left umbilical vein

A- Became urachus after birth

B- Became ligamentum teres

C- Became medial umbilical Ligaments

D- Dorsal to the disc

E- Ventral to the disc

86-Umbilical arteries

A- Became urachus after birth

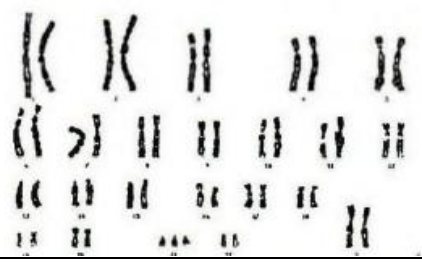

B- Became ligamentum teres

C- Became medial umbilical Ligaments

D- Dorsal to the disc

E- Ventral to the disc

87-Which of the following statements about the figure shown below is most correct?

A- Shows a normal female karyotype

B- Shows all human chromosomes

C- Shows a metaphase spread of a human genome

D- Shows Down syndrome

E- Non of the above

88-This figure refers to?

A- Male

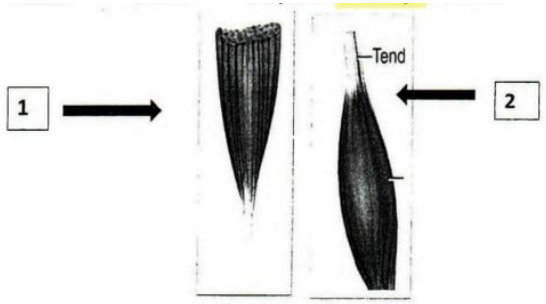

B- Female

C- Twin

D- A and B

E- All of the above

89-This muscle (number 1) is?

A- Circular

B- Unipennate

C- Bipennate

D- Convergent

E- Parallel

90-<u>Number 2 means?</u>

A- Fusiform

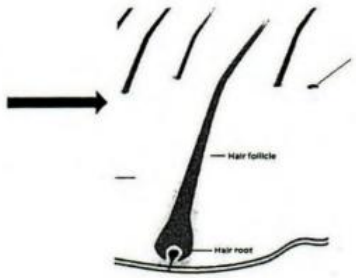

B- Unipennate

C- Bipennate

D- Convergent

E- Parallel

91-<u>This arrow means?</u>

A- Epidermis

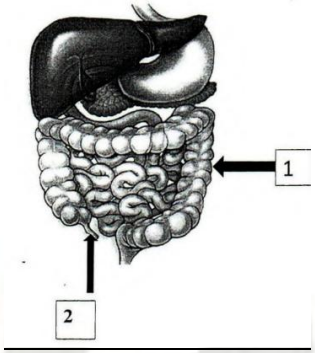

B- Dermis

C- Hypodermis

D- A and B

E- B and C

92-<u>In this figure number 1 means?</u>

A- Stomach

B- Duodenum

C- Ascending colon

D- Transverse colon

E- Descending colon

93-<u>Number 2?</u>

A- Ileum

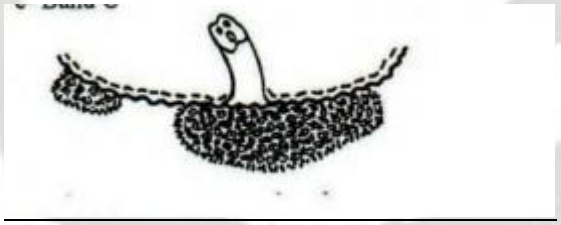

B- Caecum

C- Appendix

D- Jejunum

E- Sigmoid colon

94-<u>This anomaly means?</u>

A- Diffuse placenta

B- Accessory placenta

C- Lobed placenta

D- a and b

E- b and c

95-<u>This anomaly means?</u>

A- Diffuse placenta

B- Accessory placenta

C- Lobed placenta

D- a and b

E- b and c

96-<u>This means?</u>

A- Diffuse placenta

B- Accessory placenta C- Lobed placenta

D- Maternal surface

E- Fetal surface

2ND TRIAL 30-31

1- Patella is a large?

A- Flat bone

B- Short bone

C- Sesamoid bone

D- Long bone

E- Pneumatic bone

2- Tarsal bones are ..... in number?

A- Three

B- Five

C- Seven

D- Nine

E- Ten

3- Intervertebral disc is an example of?

A- Secondary cartilaginous joint

B- Primary cartilaginous joint

C- Pivot synovial joint

D- Fibrous joint

E- Hinge synovial joint

4- Regarding skeletal muscles, the following are true EXCEPT?

A- They are voluntary

B- They are controlled by autonomic nervous system

C- They are striated

D- They are attached to bones

E- They are present in limbs

5- In supination the palm of the hand is directed?

A- Forward

B- Backward

C- Medially

D- Laterally

E- Superior

6- Concerning retinaculae, it is a thickened band of ..... around joints?

A- Ligaments

B- Deep fascia

C- Aponeuroses

D- Bursae

E- Sheath

7- As a definition, bursae are?

A- A thick band of deep fascia

B- Deep layer of dermis

C- Closed fibrous sacs filled with synovial fluid

D- Interosseous membrane

E- Sheath around muscles

8- Regarding the bones, the following are true EXCEPT?

A- Form most of the adult skeleton

B- About 206 bones

C- Solid living tissue

D- Avascularized connective tissue

E- Dense connective tissue

9- The sternum is a part of?

A- Skull

B- Bones of the upper limb

C- Vertebral column

D- Axial skeleton

E- Appendicular skeleton

10-The number of the 1st row of carpal bones is?

A- Three

B- Four

C- Five

D- Six

E- Seven

11-The number of lumbar segments of spinal cord is?

A- Eight

B- Seven

C- Six

D- Five

E- Four

12-The number of thoracic vertebrae is?

A- Eight

B- Seven

C- Six

D- Five

E- Twelve

13-Which of the following is NOT a part of male genital system?

A- Testes

B- Epididymis

C- Vas deferens

D- Vulva

E- Prostate

14-Base of the heart is formed of?

A- Left atrium

B- Left ventricle

C- Right atrium

D- Right ventricle

E- Right and left atria

15-Which of the following planes divides the body into right and left halves?

A- Sagittal

B- Coronal

C- Parasagittal

D- Transverse

E- Horizontal

16-According to shape, deltoid muscle is?

A- Fusiform

B- Arrector pili

C- Pennate

D- Triangular

E- Strap

17-The number of phalanges in the big toe is?

A- Two

B- Three

C- six

D- five

E- four

18-Which of the following has smooth muscle fibers?

A- Eyeball

B- Teeth

C- Stomach

D- Heart

E- Cartilage

19-Following sites produce lymphocytes EXCEPT?

A- Thymus

B- Lymph nodes

C- Spleen

D- Kidneys

E- Myeloid tissue in red bone marrow

20-Which of the following is NOT a tortuous artery?

A- Aorta

B- Lingual

C- Uterine

D- Splenic

E- Coronary

21-The most important feature of vein is?

A- They have thin walls

B- They have wide lumen

C- Almost contain valves

D- Almost are deeper than the arteries

E- They carry non-oxygenated blood except the pulmonary veins

22-Portal circulation is related to?

A- Liver

B- Lungs

C- Heart

D- Brain

E- Kidney

23-Concerning superficial fascia, it is thick in?

A- Eyelids

B- Gluteal region

C- Penis

D- Scrotum

E- Clitoris

24-The following are present inside synovial joints EXCEPT?

A- Articular cartilage

B- Intra-articular ligaments

C- Synovial membrane

D- Fibrous capsule

E- Synovial fluid

25-Not included in the formation of urinary system?

A- Kidneys

B- Ureters

C- Urinary bladder

D- Urethra

E- Uterus

26-Which of the following are uniaxial synovial joints?

A- Saddle

B- Ellipsoid

C- Hinge

D- Ball and socket

E- None of the above

27-Larynx belongs to?

A- Digestive system

B- Male genital system

C- Respiratory system

D- Cardiovascular system

E- Urinary system

28-Regarding features of synovial joints, the following are true EXCEPT?

A- They are fixed joints

B- They are the most common joints in the body

C- They contain synovial fluid inside joint cavity

D- They have several axes of movement

E- They lie between two or more bones

29-Paranasal air sinuses are present in?

A- Short bone

B- Sesamoid bone

C- Irregular bone

D- Bone diploë

E- Pneumatic bone

30-Which of the following arteries cannot be felt?

A- Facial artery

B- Basilar artery

C- Femoral artery

D- Brachial artery

E- Radial artery

31-Regarding differences between right and left lungs, all are NOT true EXCEPT?

A- Left lung is shorter, wider, larger and heavier

B- Right lung consists of 3 lobes while the left lung consists of 2 lobes

C- Left lung has 2 fissures while the right lung has one fissure

D- Base is more concave in the left lung

E- Anterior border is notched in right lung (cardiac notch)

32-Regarding the pharynx, the following are NOT true EXCEPT?

A- About 12–14 inch length

B- Begins from base of skull

C- Ends at the 4th cervical vertebra

D- Continues as larynx

E- it is formed of one part

33-Largest gland associated with the digestive system is?

A- Salivary glands

B- Liver

C- Thyroid

D- Pancreas

E- Gall bladder

34-Not present in the superficial fascia?

A- Blood vessels

B- Nerves

C- Fat

D- Mammary gland

E- Cartilages

35-Regarding skin appendages, the following are true EXCEPT?

A- Nails

B- Sebaceous glands

C- Sweat glands

D- Thyroid glands

E- Hair follicles

36-Nerve plexuses present in pelvic cavity is?

A- Cervical

B- Brachial

C- Intercostal

D- Lumbar

E- Sacro-coccygeal

37-Following are end arteries EXCEPT?

A- Coronary

B- Splenic

C- Central artery of the retina

D- Uterine

E- Renal

38-Regarding the kidney, the following are true EXCEPT?

A- Related to muscles of anterior abdominal wall

B- Lies in upper part of abdomen

C- Filter urine from the blood

D- Has cortex, medulla and sinus

E- Its size 12 × 6 × 3 cm

39-Too abnormally long umbilical cord may lead to?

A- Early detachment of the placenta during delivery

B- Placenta previa

C- Placenta fenestrate

D- Knot

E- Placenta velamentosa

40-After birth, the left umbilical vein forms the?

A- Median umbilical ligament

B- Ligamentumteres of the liver

C- Lateral umbilical ligament

D- Ligamentum arteriosum

E- Ligamentum venosum of the liver

41-Following are derivatives of notochord EXCEPT?

A- Annulus fibrosus of intervertebral discs

B- Apical ligament

C- Nucleus pulposus of intervertebral discs

D- Degenerated inside bodies of vertebrae

E- Degenerated inside base of skull

42-Following are causes of hydramnios EXCEPT?

A- Twins

B- Anencephaly

C- Oesophageal atresia

D- absent renal function

E- maternal diabetes

43-Menstrual blood consists of the following EXCEPT?

A- Mucous

B- Secretions of the endometrial glands

C- Shedding of superficial part of endometrium

D- Cervical mucosa

E- Blood

44-Regarding fertilization, the following are true EXCEPT?

A- Leads to restoration of the diploid number of chromosomes

B- Penetration of corona radiata is facilitated by hyaluronidase enzyme

C- Vitelline membrane prevents penetration by more than one sperm

D- 2nd meiotic division is completed with penetration of vitelline membrane

E- Initiation of cleavage

45-Cardiogenic area is part of?

A- Para-axial mesoderm

B- Intermediate mesoderm

C- Somatopleuric mesoderm

D- Splanchnopleuric mesoderm

E- All the above

46-Large intestine consists of the following EXCEPT?

A- Duodenum

B- Cecum

C- Sigmoid colon

D- Left colic flexure

E- Transverse colon

47-Following are parts of female genital system EXCEPT?

A- Ovaries

B- Scrotum

C- Uterus

D- Vagina

E- Uterine tubes

48-Intra-embryonic mesoderm separates between ectoderm & endoderm EXCEPT in?

A- Cloacal membrane

B- Buccopharyngeal membrane

C- Septum transversum

D- Both A and B

E- Both B and C

49-Normal site of fertilization is?

A- Middle of uterine tube

B- Lateral third of uterine tube

C- Medial end of uterine tube

D- Stroma of the ovary

E- None of the above

50-Somites are derivatives from?

A- Para-axial

B- Intermediate

C- Somatopleuric

D- Splanchnopleuric

E- Septum transversum

51-Following are results of folding, EXCEPT?

A- Embryo acquires shape

B- Brain forms most cephalic part of the embryo

C- Heart becomes dorsal in position

D- Septum transversum becomes ventral in position

E- Part of the yolk sac is taken inside the embryo to form the gut

52-Fetal part of the placenta is formed by?

A- Decidua basalis

B- Chorionlaeve

C- Chorionfrondosum

D- Decidua parietalis

E- Decidua capsularis

53-Neural crest gives rise to the following structures EXCEPT?

A- Epidermis of the skin

B- Parasympathetic ganglia of the gastrointestinal tract

C- Connective tissue of the face

D- C cells of the thyroid gland

E- Glial cells

54-Following are fetal membranes EXCEPT?

A- Decidua

B- Placenta

C- Umbilical cord

D- Yolk sac

E- Allantois

55-NOT derived from endoderm is?

A- Pancreas

B- Thyroid gland

C- Epithelium of stomach

D- Connective tissue

E- Parathyroid glands

56-NOT derives from ectoderm?

A- Spinal cord

B- Sweat glands

C- Epithelium of nasal cavity

D- Cortex of suprarenal gland

E- Mammary gland

57-NOT derived from mesoderm is?

A- Heart

B- Pituitary gland

C- Skeletal muscles

D- Muscles of gastrointestinal tract

E- Cartilage

58-Normal site of implantation is?

A- Middle of the anterior aspect of uterine cavity

B- Upper aspect of uterine cavity

C- Lower aspect of uterine cavity

D- Anterior aspect of uterine cavity near the uterine tube

E- Middle of the posterior wall of uterine cavity

59-Para-axial mesoderm gives following derivatives EXCEPT?

A- Dermis of the skin

B- Vertebral column

C- Visceral muscles

D- Skeletal muscles

E- Subcutaneous tissue

60-Abnormal sites of implantation are the followings EXCEPT?

A- Ovary

B- Medial end of uterine tube

C- Vagina

D- Cervix of uterus

E- Peritoneum

61-The following are anomalies of placenta EXCEPT?

A- Velamentous insertion

B- Battledore placenta

C- Succenturiate placenta

D- Hydramnios

E- Placenta previa

62-In anatomical position, the face looks upward?

A- True

B- Flase

63-Ribs are true, false and floating

A- True

B- Flase

64-Splenic arteries are tortuous.

A- True

B- Flase

65-Cervical spinal nerves are 4 pairs in number. (Cervical spinal nerves are 8 pairs)?

A- True

B- Flase

66-Cranial nerves are 31 pairs. (Cranial nerves are 12 pairs, while spinal nerves are 31 pairs)?

A- True

B- Flase

67-Hydramnios means that amniotic fluid is more than two liters.

A- True

B- Flase

68-Gastrulation means formation of the three germ layers.

A- True

B- Flase

69-Amnion is a part of the umbilical cord (The amnion is the innermost membrane that encloses the embryo, while the umbilical cord connects the fetus to the placenta) true

70-Kidneys are developed from mesoderm

A- True

B- Flase

71-Parasympathetic ganglia are developed from the neural crest. (Parasympathetic ganglia are derived from ectoderm, not the neural crest)?

A- True

B- Flase

مرُوِيَ عن النبي ﷺ :-

«إن الله ليعجبُ من الشابِّ ليست لهُ صَبْوة» .

الصبوة: أي ليس له مَيلٌ إلى الهوى والمَعصية؛ لحسن اعتياده للخَيرِ، وقوَّة عزيمتِه في البُعد عن الشَّر في

حال الشَّباب الذي هو مظِنَّة لضِدّ ذلك، وفي الحديث بيان فضل الشاب الذي ترك المعاصي، وشُغِل بطاعة ربه.

MID 32

1- Regarding the anatomical position all of the following is true EXCEPT?

A- palms facing anteriorly

B- thumbs pointing medial

C- face pointing anteriorly

D- body standing upright

E- eye directing anteriorly

2- Which of the following types of joints are fibrocartilaginous joint?

A- Sutures of skull

B- Elbow joint

C- Intervertebral disc

D- Growth plate of growing bone

E- Sutures between teeth and gums

3- What is a joint?

A- The cushion between bone and muscle

B- Where two bones meet and move

C- The outer coating of the bone

D- The hard part of a skeleton

E- Connect the muscles to the skeleton

4- Functions of the integumentary system(skin) include all of the following EXCEPT?

A- Maintenance of body temperature

B- Synthesis of vitamin A

C- Excretion of salts and wastes

D- Protection of underlying tissue

E- Sensation

5- For the following muscle shapes, which one is fan shaped muscles?

A- fusiform

B- parallel

C- convergant

D- pennate E bipennate

6- Which one of the following structures is NOT found in the central nervous system?

A- Spinal cord

B- Brain

C- spinal nerves

D- thalamus

E- Pons

7- The shoulder and hip joints are of this type?

A- synovial

B- Fibrous

C- cartilaginous

D- fibrocartilaginous

E- none of the above

8- A joint that allows uniaxial motion only is the?

A- hinge joint

B- saddle joint

C- condyloid joint

D- ball and socket

E- a and b

9- The lumen of the digestive tract is lined with?

A- serosa

B- Mucosa

C- submucosa

D- muscularis

E- none of the above

10-The large intestine consists of the?

A- colon

B- Cecum

C- rectum

D- appendix

E- all of the above

11-What human organ system is responsible for exchanging gases with the outside environment?

A- respiratory system

B- endocrine system

C- excretory system

D- circulatory system

E- central nervous system

12-Skeletal muscle fibers are under ..... innervation?

A- Autonomic

B- Somatic

C- Sympathetic

D- Parasympathetic

E- A & B

13-all the arteries in body carrying oxygenated blood EXCEPT?

A- Superior vena cava

B- pulmonary vein

C- aorta

D- femoral artery

E- pulmonary artery

14-usually one spermatogonium gives?

A- one sperm

B- two sperm

C- three sperm

D- four sperms

E- 6 sperms

15-one statement is FALSE regarding the oogenesis?

A- start during fetal life and continue after puberty

B- oogenesis take place in the cortex of the ovary

C- number of 1ry oocyte for each ovary at birth near 1.000.000

D- at ovulation 1ry oocyte stops at metaphase of 2nd meiotic division

E- ovarian follicle completes maturation every month under effect of follicle stimulating hormone (FSH)

16-The sperm usually pass through the following EXCEPT?

A- vasa efferentia

B- head of epididymis

C- seminal vesicle

D- vas deferens

E- Urethra

17-. Process of cell division that results in two genetically identical daughter cells developing from a single parent cell is?

A- cell division

B- Mitosis

C- meiosis

D- binary division

E- cell reduction

18-Name the site of sperm maturation?

A- Epididymis

B- ejaculatory duct

C- Spermatic cord

D- Urethra

E- seminal vesicle

19-About gametogenesis all are true EXCEPT?

A- It is called spermatogenesis in males

B- It is called oogenesis in females

C- It is continuous process in male and female

D- It begins with primitive sex cells

E- It results in formation of mature gametes

20-The lymphatic system?

A- takes up excess tissue fluid and returns it to the bloodstream

B- absorbs fats in the intestinal villi and transports them to the bloodstream

C- helps to defend the body against disease

D- does all of the above

E- none of the above

21-The correct term for the end of a bone is?

A- The terminal ileum

B- The diaphysis

C- The epiphysis

D- The xiphoid

E- Epiphyseal plate

22-Spermatogenesis means?

A- Formation of sperm from primitive germ cell

B- Transport of sperm from testis

C- Formation of head cap of sperm

D- Formation of middle piece of sperm

E- Fusion of sperm with ovum

23-An organ is both for respiratory and digestive system?

A- esophagus

B- trachea

C- Intestine

D- pharynx

E- mouth

24-all the following are parts of the axial skeleton EXCEPT?

A- Skull B- Vertebrae

C- Ribs D- Sternum

E- ulna

Answers - MID 32

C	A	D	E	-	-	-	-	-	-

1- The relatively stationary end of attachment of the muscle is termed its?

A- insertion

B- origin

C- antagonist

D- belly

2- Each spinal segment gives rise to?

A- four spinal nerves

B- three spinal nerves

C- two spinal nerves

D- five spinal nerves

3- The ___ convey(s) urine from the kidneys toward the bladder?

A- Urethra

B- nephrons

C- prostate gland

D- ureters

4- In the central nervous system, the brain and spinal cord are protected by membranes known as the?

A- vesicles

B- meninges

C- tendons

D- peritoneum

5- The smooth muscles are present all of the following EXCEPT?

A- Urinary bladder

B- Limbs

C- intestine

D- Stomach

6- _____ is the hormone that is the basis for the pregnancy test?

A- Estrogen

B- Human chorionic gonadotropic hormone (HCG)

C- Progesterone

D- Prostaglandin

E- Prolactin

7- During labor, what membrane ruptures ("water breaks")?

A- Decidua basalis

B- Decidua capsularis

C- Amnion

D- Yolk sac

8- During implantation, the blastocyst?

A- implants in the endometrium

B- usually attaches to endometrial epithelium at its embryonic pole

C- usually implants in the posterior wall of the body of the uterus

D- causes erosion in the endometrial tissues

E- all of the above are correct

9- Which process in the third week of development converts the embryonic disc into the trilaminar embryo?

A- Placentation

B- Gastrulation

C- Neuralation

D- somitogenesis

10-Cleavage starts after fertilization in the?

A- Ovary

B- Fallopian tube

C- Uterus

D- Vestibule

E- Clitoris

11-The typical umbilical cord will contain which of the following?

A- One vein and two arteries

B- Two veins and two arteries

C- One artery and one vein

D- Three veins

12-The umbilical cord is formed of all the following except?

A- warton's jelly

B- umbilical vessels

C- allantois

D- mesoderm

13-What is the name of placenta attached to lower uterine segment?

A- membranous placenta

B- battledore placenta

C- placenta previa

D- placenta accrete

14-Refer to the death of one fetus (The fetal tissue is absorbed by the other twin) this condition is?

A- conjoint twins

B- Vanishing twins

C- Twin to twin transfusion syndrome

D- monozygotic twins

15-Superficial fascia does not contain fat in the?

A- eyelid

B- sole of foot

C- palm of hand

D- abdomen

16-The blood that is returned to the right atrium is?

A- Deoxygenated

B- oxygenated

C- goes to left ventricle

D- pumped to all body

17-The ___ conducts the chewed bolus of food from the pharynx to the stomach?

A- Esophagus

B- trachea

C- intestine

D- glottis

18-Differences between right and left lungs all are true except?

A- The right lung has 2 lobes, but the left lung has 3 lobes

B- The right lung is short and broad

C- The left lung is long and narrow

D- The left lung has a cardiac notch on its anterior border

19-The part of the sperm containing proteolytic enzymes is the?

A- capacitor

B- head

C- corona

D- acrosome

E- cumulus

20-The mouth is the first portion of the GIT that receives food, saliva and us the?

A- esophagus

B- trachea

C- pharynx

D- stomach

21-On the upper end of each kidney the ..... rests on it?

A- adrenal gland

B- Stomach

C- spleen

22-The fallopian tubes end in a funnel-shaped structure called the?

A- infundibulum

B- isthmus

C- body

D- intra

23-Scrotum is a sac-like organ made of skin and muscles that houses the?

A- ovaries

B- spleen

C- testis

D- sperm

24-Lymphatic vessels (lymphatics) are thin-walled vessels with..... valve?

A- no

B- a lot of

C- little

D- ex

25-The cells lying on the basement membrane of seminiferous tubule and most primitive cells called?

A- Mature sperm

B- spermatogonia

C- Primary spermatocytes

D- 2nd spermatocytes

26-Secretions that forms the Seminal fluid are from the following glands except ?

A- seminal vesicles

B- prostate

C- bulbo-urethral glands

D- vas deference

27-the primary oocyte contains?

A- 23 chromosome

B- 46 chromosome

C- x and y chromosome

D- one x chromosome

28-.....cells are the main source of estrogen in the immature (Grafin) follicle?

A- theca externa

B- theca interna

C- Antrum

D- cumulus oophorus

29-cells of corpus luteum secrete mainly?

A- estrogen

B- progesterone

C- LH

D- FSH

30-of ectoderm all EXCEPT?

A- epidermis of skin , hair and nails

B- the brain and the spinal cord

C- pia , and arachnoid mater (not the dura)

D- pituitary gland and the cortex of the suprarenal gland

31-2nd week all are true EXCEPT?

A- Implantation of the blastocyst

B- the embryonic disc is folded

C- formation of the bilaminar disc

D- appearence of the extra embryonic mesoderm and formation of the chorion

32-correct sequence of hormones from the beginning of the menustruation is?

A- FSH , progesterone , estrogen

B- estrogen , FSH , progesterone

C- FSH , estrogen , progesterone

33-patient is being seen due to vaginal bleeding four months into pregnancy . high levels of HCG hormone are found but no inner cells mass (embryo)is present?

A- is likely her diagnosis

B- hydatidiform mole

C- Ectopic pregnancy

D- placenta previa

E- placenta abruption

F- placenta accrete

34-which of the following vessel transports blood rich in Oxygen and nutrients to the fetus?

A- Ductus arteriosus

B- ductus venosus

C- umbilical vein

D- umbilical artery

E- c and d

35-the process of fertilization has the following preparatory steps EXCEPT?

A- sperm are estimated into vagina

B- sperm reach uterus by sperm movement

C- sperm undergo process of capacitation

D- sperm start its meiotic division

E- there is acrosomal reaction before sperm penetration

36-The most correct sequence of early development following fertilization is?

A- zygote, blastomeres, morula, blastocyst

B- oocyte, zygote, morula, blastocyst

C- zygote, conceptus, blastocyst

D- Morula, zygote, blastocyst, blastomeres

37-The chorion forms the wall of the chorionic vesicle. It consists of3 layers; which is wrong?

A- Syncytiotrophoblast

B- Epiblast

C- Cytotrophoblast

D- Extra-embryonic mesoderm

38-The placental barrier consists of the following layers EXCEPT?

A- Syncytiotrophoblast

B- Decidua basalis

C- Cytotrophoblast

D- Extra-embryonic mesoderm in the core of the villus

E- Endothelium lining the foetal vessels

39-Wharton's jelly forms the main bulk of the?

A- Amnion

B- Umbilical cord

C- Ovary

D- Testis

E- Zygote

40-Which division of the nervous system initiates a response known as fight or flight?

A- The sympathetic nervous system

B- The parasympathetic nervous system

C- The somatic nervous system

D- None of the above

41-The greatest range of motion is provided by the?

A- pivot joint

B- ball-and-socket joint

C- saddle joint

D- condyloid joint

42-Which of the following produces the male sex hormone?

A- Rete testis

B- Seminiferous tubule

C- Leydig cell

D- Scrotum

E- Vas deference

43-If for some reason, the vasa efferentia in the human reproductive system get blocked, the gametes will not be transported from?

A- Vagina to uterus

B- Testes to epididymis

C- Epididymis to vas deferens

D- Ovary to uterus

E- vas deference to ejaculatory duct

44-ligamentum teres of liver is a ligament which was..... in the embryo?

A- Ductus arteriosus

B- Umbilical vein

C- Ductus venosus

D- Umbilical artery

E- c and d

45-As regard the lymph vessels?

A- Thin walled and beeded

B- Thick wall and beeded

C- Carry the lymph to the spleen

D- Carry the lymph to liver

46-Write the correct sequence of the pathway through which air travels after entering the body?

A- Larynx, pharynx, trachea bronchioles

B- Pharynx, larynx, trachea, bronchioles

C- Pharynx, larynx, bronchioles, trachea

D- Pharynx, trachea, larynx, bronchioles

47-The function of Sertoli cells is?

A- secrete hormones

B- help in ejaculation

C- develop sperm

D- supporting cells in the testis

E- Non of the above

48-Functions of the yolk sac(all except)?

A- Gut formation

B- Urinary bladder formation

C- Primordial sex cells formation

D- Skin formation

E- Blood cells formation

2ND TRIAL 32

1- Superficial fascia is very dense in the?

A- Ear pinna

B- Eyelid

C- sole of foot

D- scrotum

2- Regarding the long bone all are true except?

A- has compact outer layer

B- has inner cancellous layer

C- it forms blood

D- has epiphyseal cartilage in the adult

3- The non -oxygenated blood pass through the ..... to the two lungs where oxygenation of this blood occurs?

A- Aorta

B- pulmonary veins

C- pulmonary arteries

D- coronary sinus

4- In the central nervous system, the brain and spinal cord are protected by membranes known as the?

A- vesicles

B- Meninges

C- tendons

D- peritoneum

5- Differences between right and left lungs all are true except?

A- The right lung has 2 lobes, but the left lung has 3 lobes

B- The right lung is short and broad

C- The left lung is long and narrow

D- The left lung has a cardiac notch on its anterior border

6- Cardiac Orifice is the opening by which the ..... communicates with stomach?

A- colon

B- Duodenum

C- esophagus

D- mouth

7- Lymphatic vessels (lymphatics) are thin-walled vessels with..... valves?

A- no

B- a lot of

C- little

D- external

8- The functional unite of the kidney is?

A- Nephrons

B- collecting tubule

C- renal artery

D- renal veins

9- The..... are a pair of muscular tubes that extend from upper ends of uterus?

A- ovaries

B- fallopian tube

C- vagina

D- cervix

10- On the upper end of each kidney the ..... rests on it?

A- adrenal gland

B- Stomach

C- spleen

D- liver

11- Scrotum is a sac-like organ made of skin and muscles that houses the?

A- ovaries

B- Spleen

C- testis

D- uterus

12- Ovarian follicles present mainly in?

A- ovarian medulla

B- ovarian cortex

C- cervix

D- fallopian tubes

13-In humans, each cell normally contains ..... pairs of chromosomes?

A- 46

B- 23

C- 47

D- 2

14-.....is a process where a single cell divides into two identical daughter cells?

A- autosome

B- Karyotype

C- meiosis

D- Mitosis

15-The primary oocyte contains?

A- 23 chromosomes

B- x and Y chromosomes

C- 46 chromosomes

D- one x chromosome

16-Secretions that forms the Seminal fluid are from the following glands except?

A- Seminal vesicles

B- bulbo urethral glands

C- Prostate

D- vas deference

17-The cells lying on the basement membrane of seminiferous tubule in most primitive cells and called?

A- Mature sperm

B- spermatogonia

C- Primary spermatocytes

D- 2nd spermatocytes

18-..... is the hormone that is the basis for the pregnancy test?

A- Estrogen

B- Human chorionic gonadotropic hormone (HCG)

C- Progesterone

D- Prostaglandin

19-luteinizing cells of corpus luteum secrete mainly?

A- estrogen

B- LH

C- progesterone

D- FSH

20-Cleavage starts after fertilization in the?

A- Ovary

B- Fallopian tube

C- Uterus

D- Vestible

21-What is the name of placenta attached to lower uterine segment?

A- membranous placenta

B- battledore placenta

C- placenta previa

D- placenta accrete

22-Muscles' and 'excretory' structures arises from?

A- Mesoderm

B- Ectoderm

C- Endoderm

D- Trophoblastic

23-Embryoblast means?

A- outer cell mass of blastocyst

B- inner cell mass of blastocyst

C- Blastocoele

D- Trophoblast

24-The acrosome is formed from?

A- Nucleus

B- Golgi bodies

C- Centrosome

D- Mitochondria

25-The sperm usually pass through the following except?

A- vasa efferentia

B- head of epididymis

C- Seminal vesicle

D- vas deferens

26-Derivatives of ectoderm all EXCEPT?

A- Epidermis of the skin, hair and nails

B- The brain and spinal cord

C- pia, and arachnoid mater (not the dura)

D- cortex of the suprarenal gland

27-During 2nd week all are true EXCEPT?

A- implantation of the blastocyst

B- The embryonic disc is folded

C- Formation of the bilaminar disc

D- Appearance of extra-embryonic mesoderm and formation of chorion

28-Correct sequence of hormone secretion from beginning of men?

A- FSH, progesterone, estrogen

B- Estrogen, FSH, progesterone

C- FSH, Estrogen, progesterone

D- Estrogen, progesterone, FSH

29-Which vessel transports blood rich in oxygen and nutrients to the fetus ?

A- Ductus arteriosus

B- Ductus venosus

C- Umbilical vein

D- Umbilical artery

30-The process of fertilization has the following preparatory steps, except?

A- sperm are estimated into vagina

B- sperm reach uterus by sperm movement

C- sperm undergo process of capacitation

D- sperm start its meiotic division

31-The most correct sequence of early development following fertilization is?

A- Zygote, blastomeres, morula, blastocyst

B- oocyte, zygote, morula, blastocyst

C- zygote, conceptus, blastocyst

D- Morula,zygote,blastocyst,blastomeres

32-Wharton's jelly forms the main bulk of the?

A- Amnion

B- Umbilical cord

C- Ovary

D- Testis

33-Which division of the nervous system initiates a response know as 'fight or flight?

A- The sympathetic nervous system

B- The parasympathetic nervous system

C- The somatic nervous system

D- Vertebral column

34-The greatest range of motion is provided by the?

A- pivot joint

B- ball-and-socket joint

C- saddle joint

D- condyloid join

35-Which of the following produces the male sex hormone?

A- Rete testis

B- Seminiferous tubule

C- Leydig cell

D- Scrotum Screenshot 2

36-Ligamentum teres of liver is a ligament which was..... in the embryo?

A- Ductus arteriosus

B- Umbilical vein

C- Ductus venosus

D- Umbilical artery

37-Functions of the yolk sac(all except)?

A- Gut formation

B- Primary bladder formation

C- Primordial sex cells formation

D- Skin formation

38-Write the correct sequence of the pathway through which air travels entering the body?

A- Larynx, pharynx, trachea, bronchioles

B- Pharynx, larynx, trachea, bronchioles

C- Pharynx, larynx, bronhioles, trachea

D- Pharynx, trachea, larynx, bronchioles

39-Regarding the anatomical position all of the following is true except?

A- palms facing anteriorly

B- thumbs pointing medial

C- face pointing anteriorly

D- body standing upright

40-For the following muscle shapes, which one is fan shaped muscle?

A- fusiform

B- Parallel

C- convergent

D- pennate

41-The lumen of the digestive tract is lined with?

A- serosa

B- Mucosa

C- submucosa

D- muscularis

42-Formation of primitive streak marks the beginning of?

A- Neurulation

B- gastrulation

C- Folding

D- notochord formation Screenshot 3

43-Skeletal muscle fibers are under ..... innervation?

A- Autonomic

B- Somatic

C- Sympathetic

D- Parasympathetic

44-One statement is false regarding the oogenesis?

A- start during fetal life and continue after puberty

B- oogenesis take place in the cortex of the ovary

C- number of 1y oocyte for each ovary at birth near 1.000.000

D- At ovulation 1ry oocyte stops at metaphase of 2nd meiotic division

45-About gametogenesis all are true EXCEPT?

A- It is called spermatogenesis in males

B- It is called oogenesis in females

C- It is continuous process in male and female

D- It begins with primitive sex cells

46-The correct term for the end of a bone is?

A- The terminal ileum

B- The diaphysis

C- The epiphysis

D- The xiphoid

47-About Umbilical cord contents all included EXCEPT?

A- Allantois

B- 2 umbilical arteries

C- 2 umbilical veins

D- vitello-intestinal duct

48-The zone of small follicular cells immediately surrounding the ovarian graafian follicle and accompanying the ovum on its discharge from the ovary is called?

A- endometrium

B- Zona pellucida

C- Corona radiate

D- corpus luteum

من بركة لزوم الاستغفار ومزاحمة الذنوب بالحسنات تعجيل الفرج بعد الشدة والأنس بعد الوحشة.

قال الإمام ابن القيم:

"العبد إن غيّر المعصية بالطاعة غيّر الله عليه العقوبة بالعافية والذل بالعز".

MID 33

1- Regarding the anatomical position all of the following is true except?

A- palms facing posterior

B- thumbs pointing lateral

C- face pointing anteriorly

D- body standing upright

2- For the following muscle shapes, which one is fan shaped muscles?

A- Fusiform

B- Parallel

C- Convergent

D- Pennate

3- An organ is both for respiratory and digestive system?

A- Esophagus

B- Trachea

C- Intestine

D- Pharynx

4- The connective tissue that surrounds muscles, blood vessels, and nerves, binding those structures together is?

A- Superficial fascia

B- Internal fascia

C- Deep fascia

D- Dermis

5- The left atrium receives newly oxygenated through?

A- Pulmonary artery

B- Pulmonary veins

C- Aorta

D- Coronary artery

6- All are true about veins EXCEPT?

A- Carry deoxygenated blood from the body to the heart

B- All of which carry deoxygenated blood except the pulmonary veins

C- At tissue level capillaries drain blood into venules

D- Veins are valveless vessels

7- All are true about human chromosomes EXCEPT?

A- each cell contains 23 pairs of chromosomes

B- sex chromosomes are called autosomes

C- sex chromosomes are one pair

D- Chromosomes are thread-like structures

8- About mature sperm all are true EXCEPT?

A- Consists only of head, neck and tail

B- Acrosomal cap covering head anterior half

C- Golgi apparatus forming the acrosomal cap

D- Length is about 60 microns

9- Proximal means?

A- In front

B- In back

C- Near the root

D- Near the end

10-Which one of the followings is **incorrectly matched regarding male reproductive organ?**

A- Testes: Sperm and sex hormones are produced

B- Prostate gland: Contributes fluid to semen

C- Urethra: Contributes nutrients and mucus-containing fluid to semen

D- Seminal vesicle: provide secretion into ejaculatory duct

11-Male urethra is about.....cm Length while female urethra is.....cm?

A- 4&20

B- 10&4

C- 20&4

D- 4&10

12-Name the special cells which secrete testosterone in the testis?

A- Spermatogonia

B- Leydig's cells

C- rete testis

D- Sertoli cells

13-Lymphatic vessels are found almost everywhere except?

A- spleen

B- tonsil

C- bone marrow

D- Liver

14-In the central nervous system, the brain and spinal cord are protected by membranes known as the?

A- Vesicles

B- meninges

C- tendons

D- peritoneum

15-Differences between right and left lungs all are true EXCEPT?

A- The right lung has 2 lobes, but the left lung has 3 lobes

B- The right lung is short and broad

C- The left lung is long and narrow (the heart lies on the left side)

D- The left lung has a cardiac notch on its anterior border

16-About Planes of the body all are true EXCEPT?

A- Transverse Plane divides the body into upper and lower parts

B- Midsagittal plane dividing the body into right and left equal halves

C- Sagittal planes dividing the body into right and left unequal halves

D- Coronal Plane divides the body into an medial and lateral portion

17-Medial means?

A- Near the midsagittal plane

B- Near the sagittal plane

C- Near the root

D- Near the end

18-About Skin all are true EXCEPT?

A- superficial layer called the epidermis

B- deep layer called the dermis

C- dermis is avascular part

D- dermis contains sweat glands

19-Bones, imbedded in a tendon are called?

A- Short Bones

B- Long Bones

C- Irregular Bones

D- Sesamoid Bones

20-About long bones all are true EXCEPT?

A- The long shaft called the diaphysis

B- outer part is made of cancellous bone

C- interior part consists of the medullary cavity

D- Ends of epiphyses are covered with a hyaline cartilage

21-About joints all are true EXCEPT?

A- Cartilaginous joints are immoveable

B- Fibrous joints are unified by fibrous tissue

C- Most common type is synovial joint

D- Multiaxial permit movements around more than two axis

22-The function of Sertoli cells is?

A- secrete hormones

B- help in ejaculation

C- develop sperms

D- supporting cells in the testis

23-The correct passway about Sperm transport is?

A- vasa efferentia -> epididymis -> rete testis -> duct deferens -> ejaculatory duct -> urethra

B- vasa efferentia -> epididymis -> rete testis -> ejaculatory duct -> duct deferens -> urethra

C- rete testis -> vasa efferentia -> epididymis -> duct deferens -> ejaculatory duct -> urethra

D- rete testis -> vasa efferentia -> duct deferens -> epididymis -> ejaculatory duct -> urethra

24-The outcome of mitosis?

A- Two cells with haploid number

B- Four cells with haploid number

C- Two cells different from the parent cell

D- Two cells identical to the parent cell

25-Embryonic stem cell is?

A- Pluripotent

B- Multipotent

C- Totipotent

D- Unipotent

FINAL 33

1- Placental barrier (membrane) consists of all of the following EXCEPT?

A- Syncytiotrophoblast

B- Cytotrophoblast

C- Endothelium of the fetal vessels

D- Cotyledons

2- All of the following are result of folding EXCEPT?

A- formation of gut tube

B- Buccopharyngeal membrane; comes to lie most cranial

C- Cloacal membrane; comes to occupy the most caudal

D- Connecting stalk; comes to lie caudal to the disc

3- The amniotic cavity appears on the eighth day as a slit-like space between the trophoblast and the?

A- Extraembryonic mesoderm

B- Embryoblast

C- Exocoelomic membrane

D- Connecting stalk

4- Regarding the placenta all of the following is true EXCEPT?

A- It is a temporary organ

B- 15-25 cm

C- maternal surface formed by the chorionic plate

D- maternal blood never mixes with fetal blood

5- In monozygotic twins if separation occurs at two cell stage each twin will has?

A- 2 separate placenta and one common amnion

B- 2 separate amnions

C- One common chorion

D- One common amnion

6- About The decidua all are true EXCEPT?

A- It is the endometrium under the effect of the estrogen hormone

B- Decidua capsularis covers the superficial aspect of the blastocyst

C- Decidua basalis lies deep to the blastocyst

D- Decidua parietalis lines the walls of the uterus away from the site of the blastocyst

7- About The notochord all are true EXCEPT?

A- the first longitudinal midline axis of the embryo

B- around which the vertebral bodies are organized

C- develops from the endodermal cells of the primitive node

D- The notochordal process stops at the cloacal membrane

8- About the neural tube all are true **EXCEPT?

A- Ventral tubular structure in the embryo

B- Cells of lateral margin of the plate form the neural crest

C- forms the brain from its cranial broad part

D- forms the spinal cord from its caudal narrower part

9- About chorion all are true EXCEPT?

A- It forms the wall of the chorionic vesicle

B- Syncytiotrophoblast share in its formation

C- Intra-embryonic mesoderm share in its formation

D- Cytotrophoblast share in its formation

10-In which menstrual cycle phase does implantation occur?

A- Menses

B- Ovulation

C- Secretory

D- Proliferative

11-Mesoderm gives rise to all the structures EXCEPT?

A- Gonads

B- Circulatory system

C- Nervous system

D- Muscular system

12-The primary oocyte contains?

A- 23 chromosomes

B- 46 chromosomes

C- x and Y chromosomes

D- one x chromosome

13-corona radiate is the name given for?

A- stroma cells outside of the stratum granulosum

B- granulose cells attached to the zona pellucida after ovulation

C- granulose cells surrounds the primary oocyte

D- primordial follicle

14-Correct sequence of hormone secretion from beginning of menstruation is?

A- FSH, progesterone, estrogen

B- Estrogen, FSH, progesterone

C- FSH, estrogen progesterone

D- Estrogen, progesterone, FSH

15-In humans, cleavage begins in the?

A- Ovary

B- Fallopian tube

C- Uterus

D- Vagina

16-During implantation, about the blastocyst all are true EXCEPT?

A- Implants in the endometrium

B- usually attaches to endometrial epithelium at its embryonic pole

C- usually implants in the lower part of the body of the uterus

D- causes change in the endometrial tissues

17-Medial umbilical Ligaments are results of?

A- Umbilical veins

B- Umbilical arteries

C- Allantois

D- vitello-intestinal duct

18-A married 35 year old female noticed delayed in her menstrual cycle for month, doctor examined heir suspected pregnancy which hormone suspect to be elevated in this case?

A- LH

B-

C- S.H

D- H.C.G

E- estrogen

19-During labor, what membrane ruptures ("water breaks")?

A- Decidua basalis

B- Decidua capsularis

C- Amnion

D- Yolk sac

20-All statements about synovial membrane are correct except?

A- Secretes synovial fluid

B- Covers the inner layer of the capsule

C- Covers the articular cartilage

D- Cover the inner parts of articular bones

21-Derivatives of the yolk sac all are true **EXCEPT?

A- Blood cells are derived from mesoderm

B- Primordial sex cells migrate to the gonads

C- The gut is derived from the floor of the sac

D- Allantois will share in bladder formation

22-About Spermatogenesis all are correct **except?

A- it occurs in somniferous tubules of testis

B- starts before Puberty

C- it takes about 74 days

D- sperms complete maturation in the epididymis

23-spermiogenesis means?

A- process of development of sperm from spermatogonia

B- process of development of sperm from primary spermatocyte

C- morphological changes of secondary spermatocyte to mature sperm

D- morphological changes of spermatid to mature sperm

24-About oogenesis all are correct EXCEPT?

A- it starts intrauterine

B- primary oocyte completes the first meiosis division before Puberty

C- primordial follicle has only one raw of flat follicular cells

D- it occurs in the cortex of the ovary

25-..... is the primary female sex organ?

A- The uterus

B- The ovary

C- Fallopian tubes

D- Vagina

26-The third layer formed in gastrulation is the?

A- Ectoderm

B- endoderm

C- Mesoderm

D- blastocoel

27-The central nervous system is derived from ..... the axial skeleton is derived from ..... and the muscles of the trunk are derived from?

A- ectoderm, mesoderm, endoderm

B- ectoderm, mesoderm, mesoderm

C- all are derived from mesoderm

D- all are derived from ectoderm

28-Which three sections do the small intestine consists of?

A- ileum duodenum, caecum

B- colon, jejunum, duodenum

C- rectum, ileum, duodenum

D- ileum, duodenum, jejunum

29-Which of the following presents the structures through which food travels in the correct sequence?

A- esophagus, ileum, duodenum, ileo-cecal valve, transverse colon, rectum

B- stomach, duodenum, ileum, ascending colon, transverse colon

C- stomach, duodenum, jejunum, ileum, ascending colon, transverse colon

D- stomach, duodenum, transverse colon, ileum, jejunum, rectum

30-The three sections of the pharynx in order are?

A- Nasopharynx / laryngopharynx / oropharynx

B- Laryngopharynx/ nasopharynx/ oropharynx

C- Nasopharynx / oropharynx / laryngopharynx

D- Nasopharynx/ oropharynx / larynx

31-All of the following about pivot type of joints are true EXCEPT?

A- Their movements are permitted in one plane

B- They are uniaxial joints

C- They are present in superior radioulnar joints

D- They are biaxial joints

32-All are true about 1ry cartilaginous joints EXCEPT?

A- They are called (synchondrosis)

B- They are united by hyaline cartilage

C- They are permanent

D- They are found in epiphyseal plate

33-All are true about The lymphatic system EXCEPT?

A- Lymph nodes are through which lymph is filtered

B- Lymphatic vessels are thick-walled vessels with valves

C- Lymphoid tissue produce lymphocytes

D- Lymph is the name for fluid inside the lymph vessels

34-All are true about The nervous system EXCEPT?

A- enables the body to react only to changes in its external environment

B- divided into central nervous system and peripheral nervous system

C- spinal nerves are mixed nerves

D- the central nervous system made up of the brain and spinal cord

35-.....Refer to the death of one fetus (The fetal tissue is absorbed by the other twin) this condition is?

A- Conjoint twins

B- Vanishing twin

C- Twin to twin transfusion syndrome

D- craniopagus

36-All are true about Meiosis EXCEPT?

A- one cell Divides twice to form four daughter cells

B- Meiosis occurs through 2 stages (meiosis I) followed by (meiosis II)

C- Meiosis I produces 2 haploid daughter cells

D- Meiosis II produces 4 haploid daughter cells

37-1st polar body contains?

A- 46 chromosomes

B- 23 chromosomes

C- 2 chromosomes

D- 3 chromosomes

38-All are true about corpus luteum EXCEPT?

A- Without fertilization it degenerates within 10 days of ovulation

B- With fertilization it remains for 4-5 months

C- secrete progesterone hormone

D- formed under effect of FSH

39-All are true about Fertilization EXCEPT?

A- process by which the male and female gametes fuse

B- takes place in the medial part of the uterine tube

C- only one sperm is capable of penetrating the ovum

D- only the head of the sperm which enters the ovum

40-The ovum, if not fertilized, loses its viability and degenerates ..... within?

A- 72 hours

B- 72 days

C- 24 hours

D- 24 days

41-All are true about blastocyst EXCEPT?

A- formed about the 6day of fertilization

B- having a cavity called blastocoele

C- implanted into the endometrium

D- inner cell mass develop into trophoblast

42-About implantation all are true EXCEPT?

A- Adhesion of blastocyst to the endometrium

B- Occurs by the end of the 2nd week after fertilization

C- blastocyst invades the endometrium by the embryonic pole

D- during it corpus luteum still secreting progesterone and oestrogen hormones

43-About events during 3rd week of development all are true **EXCEPT?

A- embryonic disc becomes bilaminar

B- chorionic villi become tertiary

C- notochord is completely developed

D- cardiovascular system starts its differentiation

44-Extra-embryonic mesoderm?

A- called primary mesoderm

B- called secondary mesoderm

C- called tertiary mesoderm

D- called definitive mesoderm

45-Cavity ventral to the embryonic disc?

A- amniotic cavity

B- yolk sac

C- neural tube

D- Notochord

46-Definitive yolk sac named after?

A- Implantation

B- Folding

C- Allantois formation

D- birth

47-The blood in the intervillous space is?

A- Maternal

B- Fetal C- Mixed

D- from yolk sac

48- After normal labor to a woman and placental separation and expulsion, this woman has severe bleeding the doctor examined her, and found small lobe of the placenta persists, this anomaly is called?

A- membranous placenta

B- Accessory placenta

C- Placenta accrete

D- placenta previa

Answers - FINAL 33

1- Bones that surround the spinal cord are classified as.....bones?

A- irregular

B- sesamoid

MID 34

C- flat

D- short

2- Which one of the followings is incorrectly matched regarding male reproductive organ?

A- Testes: Sperm and sex hormones are produced

B- Epididymis: Ducts where sperm mature

C- Prostate gland: Contributes fluid to semen

D- Urethra: Contributes nutrients and mucus-containing fluid to semen

E- Seminal vesicle: provide secretion into ejaculatory duct

3- All of the following about hinge type of joints are true EXCEPT?

A- Their movements are permitted in one plane

B- They are uniaxial joints

C- They are present in elbow joint

D- They are biaxial joints

E- It has two movements

4- In the anatomical position the thumb is directed?

A- Medially

B- Laterally

C- Superior

D- Inferior

5- Muscles present in the wall of blood vessels are?

A- Voluntary

B- Striated

C- smooth

D- Skeletal

6- Inter-vertebral disc is?

A- Synovial joint

B- Fibrous joint

C- Primary cartilaginous

D- Secondary cartilaginous

7- For the following muscle shapes, which one is fan shaped muscles?

A- fusiform

B- parallel

C- convergent

D- pennate

8- All are true about Meiosis EXCEPT?

A- one cell Divides twice to form four daughter cells

B- Meiosis occurs through 2 stages (meiosis I) followed by (meiosis II

C- Meiosis I produces 2 diploid daughter cells

D- Meiosis II produces 4 haploid daughter cells

9- All are true about The lymphatic system EXCEPT?

A- Lymph nodes are through which lymph is filtered

B- Lymphatic vessels are thick-walled vessels with valves

C- Lymphoid tissue produces lymphocytes

D- Lymph is the name for fluid inside the lymph vessels

10-An organ is both for respiratory and digestive system?

A- esophagus

B- trachea

C- intestine

D- pharynx

11-The connective tissue that surrounds muscles, blood vessels, and nerves, binding those structures together is?

A- superficial fascia

B- internal fascia

C- deep fascia

D- dermis

12-The left atrium receives newly oxygenated through?

A- Pulmonary artery

B- pulmonary veins

C- Aorta

D- coronary artery

13-All statements about synovial membrane are correct except?

A- Secretes synovial fluid

B- Covers the inner layer of the capsule

C- Covers the articular cartilage

D- Cover the inner parts of articular bones

14-All are true about veins except?

A- carry deoxygenated blood from the body to the heart

B- All of which carry deoxygenated blood except the pulmonary veins

C- At tissue level capillaries drain blood into venules

D- Veins are valveless vessels

15-From the following selections, identify the directional terms equivalent to ventral, posterior, superior, and inferior in the correct sequence?

A- dorsal, anterior, caudal, cephalic

B- anterior, dorsal, cephalic, caudal

C- anterior, dorsal, caudal, cephalic

D- cephalic, caudal, posterior, anterior

16-All are true about human chromosomes EXCEPT?

A- each cell contains 23 pairs of chromosomes

B- sex chromosomes are called autosomes

C- sex chromosomes are one pair

D- Chromosomes are thread-like structures

17-About joints all are trué EXCEPT?

A- Cartilagenous joints are immoveable Pattians

B- fibrous joints are united by fibrous tissue

C- most common type is synovial joint

D- multiaxial permit movements around more than two axis

18-About long bones all are true EXCEPT?

A- The long shaft called the diaphysis

B- outer part is made of cancellous bone

C- Interior part consists of the medullary cavity

D- Ends of epiphyses are covered with a hyaline cartilage

19-Chromosomal reduction during gametogenesis occurs due to the?

A- Meiosis B .Mitosis

B- Non-disiunction

C- Amitosis

20-Deepest structure of the followings is?

A- Deep fascia

B- Skin

C- Superficial fascia

D- Bones

21-Lymphatic vessels are found almost everywhere except?

A- Spleen

B- tonsil

C- brain

D- liver

22-In the central nervous system, the brain and spinal cord are protected by membranes known as the?

A- Vesicles

B- Meninges

C- tendons

D- peritoneum

23-Differences between right and left lungs all are true except?

A- The right lung has 2 lobes, but the left lung has 3 lobes

B- The right lung is short and broad

C- The left lung is long and narrow (the heart lies on the left side)

D- The left lung has a cardiac notch on its anterior border

24-About Planes of the body all are true EXCEPT?

A- Transverse Plane divides the body into upper and lower parts

B- Midsagittal plane dividing the body into right and left equal halves

C- Sagittal planes dividing the body into right and left unequal halves

D- Coronal Plane divides the body into an medial and lateral portion

25-The inner cell mass in the blastocyst can differentiate into?

A- Only one type of cells in brain

B- All types of body tissues

يا عبدالله !

كلما دعتك نفسك لمعصية، تذكّر ظُلمة القبر

تذكّر عرضك على الله !

تذكّر عبدي لِمَ جعلتني أهون الناظرين إليك !

تذكّر منزلك في الجنة وقد أبدلك الله به منزلاً في النار

بسبب تلك المعصية عياذاً بالله .

تذكر حسرتك حينها ،

تذكّر يا أخي قبل أن تتحسّر .

تُبْ الآن، فالموتُ يأتي بغتة .

FINAL 34

1- During formation of the notochord ..... appears as a temporary connection between the yolk sac and amniotic activity?

A- primitive pit

B- Notochordal canal

C- Neurenteric canal

D- Extra embryonic cavity

2- Definitive yolk sac named after?

A- Implantation

B- Folding

C- Allantois formation

D- Birth

3- After normal labor to a woman and placental separation and expulltion, this woman has severe bleeding the doctor examined her , and found small lobe of the placenta persists, this anomaly is called?

A- membranous placenta

B- Accessory placenta

C- Placenta accrete

D- Placenta previa

4- the most correct sequence of early development following fertilization?

A- zygote , blastomers, morula , blastocyst

B- oocyte , zygote, morula , blastocyst

C- zygote, conceptus , blastocyst

D- polar bodies , zygote , conceptus , blastocyst

5- Following structures developed from mesoderm except?

A- skeletal muscles

B- gut muscles

C- gut mucosa

D- kidney

6- Following structures are derived from ectoderm except?

A- Nasal mucosa

B- Nervous tissue

C- Adrenal cortex

D- Adrenal medulla

7- Following structures derived from endoderm except?

A- Pancreas

B- lining of respiratory tract

C- limb muscles

D- lining of the biliary passages

8- Following events occur in the 3rd week except?

A- Gastrulation

B- notochord formation

C- Folding

D- neural tube development

9- Regarding the placenta , following are true except?

A- Circular of 15 to 25 cm diameter

B- 3cm thickness

C- 300 to 600 gm weight

D- it's maternal surface is smooth and shiny

10-..... forms the floor of amniotic cavity?

A- endoderm

B- mesoderm

C- ectoderm

D- trophoblast

11-in relation to the dizigotic twins, followings are true except?

A- two ova are ovulated at the same time

B- each ovum is fertilized by a separate septum

C- have separate placenta , amnions and chorions

D- may lead to conjugated twins

12-the neural tube forms the..... from its cranial broad part and forms the ..... from its caudal narrower part?

A- spinal cord , brain

B- Brain , spinal cord

C- brain , vertebral column

D- vertebral column , spinal cord

13-All of the following are result of folding except?

A- formation of gut tube

B- connecting stalk comes to lie ventral to the disc

C- embryo acquires shape

D- heart becomes dorsal in position

14-During Implantation, the ..... secrets HCG that maintains corpus luteum?

A- Trophoblast

B- Epiblast

C- Hypoblast

D- Amniogenic cells

15-Mechanisms of folding include enlargement of the?

A- Amniotic cavity

B- Yolk sac

C- Extra-embryonic cavity

D- Intra-embryonic cavity

16-The mesodermal somites originated from?

A- Para-axial

B- Intermediate

C- somatopleuric

D- Splanchnopleuric

17-Which of the following presents the structures through which food travels in the correct sequence?

A- esophagus. ileum. duodenum, ileo-cecal valve . transverse colon, rectum

B- stomach, duodenum, ileum, ascending colon . transverse colon

C- stomach .duodenum, jejunum, ileum ,ascending colon . transverse colon

D- stomach, duodenum, transverse colon. Ileum . jejunum , rectum

18-Which one of the followings is incorrectly matched regarding male reproductive organ?

A- Testes: Sperm and sex hormones are produced

B- Epididymis: Ducts where sperm stored

C- Prostate gland: Contributes fluid to semen

D- Seminal vesicle Ducts where sperm mature

19-All are true about the nervous system EXCEPT?

A- enables the body to react only to changes in its external environment

B- divided into central nervaus system and peripheral nervous system

C- spinal nerves are mixed nerves

D- the central nervous system made up of the brain and spinal cord

20-one of the following statement about primitive streak is false?

A- it is a transient structure

B- It appears as an elongating groove on the dorsal surface of the epiblast

C- at the caudal end its cells proliferate to form the primitive knot

D- It is the 1st step in the formation of the mesodermal cells

21-Placenta previa means implantation in?

A- Uterine tube

B- Outer surface of ovary

C- Lower uterine segment

D- Abdominal cavity

22-full-term umbilical cord shows the disappearance of?

A- left umbilical vein

B- right umbilical vein

C- right umbilical artery

D- left umbilical arter

23-All are false about corpus luteum EXCEPT?

A- With fertilization it degenerates within 10 days of ovulation

B- Without fertilization it remains for 4 to 5 months

C- secrete progesterone hormone

D- forme under effect of FSH

24-one of these structure has diploid number of chromosome?

A- 1ry oocyte

B- 1St polar body

C- 2ry oocyte

D- mature ovum

Answers - FINAL 34

استغفر الله العظيم من كل ذنب عظيم وأتوب إليه

FINAL 35

1- correct sequence of hormone secretion from beginning of the menstruation?

A- FSH , progesterone , estrogen

B- Estrogen , FSH , progesterone

C- FSH , estrogen , progesterone

D- Estrogen , progesterone , FSH

2- about gametogenesis all are true EXCEPT?

A- it is called spermatotogenesis in males

B- it is called oogenesis in females

C- It begins with primitive sex cells

D- its a continuous process in male and females

E- it resulrs in formation of mature gametes

3- correct answer about sperm transport?

A- rete testis , duct deferens , Epididymis , ejaculatory duct

B- rete testis , Epididymis , duct deferens , ejaculatory duct

C- ejaculatory duct , rete testis, Epididymis, duct deferens

D- duct deferens, rete testis , epididymis , ejaculatory duct

4- all are true about corpus luteum EXCEPT?

A- without fertilization it degenerates within 10 days of ovulation

B- with fertilization it remains for 4 to 5 months

C- secrete progesterone hormone

D- formed under effect of FSH

5- all of the following are result from folding except?

A- formation of gut tube

B- buccopharyngeal membrane comes to lie most cranial

C- cloacal membrane comes to occupy the most

D- connecting stalk comes to lie caudal to the disc

6- First polar body is formed from?

A- primordial germ cells

B- oogonia

C- primary oocyte

D- secondary oocyte

7- the most correct sequence of early development following fertilization?

A- zygote, blastomeres, morula, blastocyst

B- oocyte, zygote, morula, blastocyst

C- zygote, conceptus, blastocyst

D- Morula, zygote, blastocyst, blastomeres

8- usually one spermatogonium gives?

A- one sperm

B- two sperm

C- three sperm

D- four sperms

9- About chorion all are true EXCEPT?

A- It forms the wall of the chorionic vesicle

B- Syncytiotrophoblast share in its formation

C- Intra-embryonic mesoderm share in its formation

D- Cytotrophoblast share in its formation

10-Medial umbilical Ligaments are results of?

A- Umbilical veins

B- Umbilical arteries

C- Allantois

D- vitello-intestinal duct

11-Definitive yolk sac named after?

A- Implantation

B- Folding

C- Allantois formation

D- birth

12-cavity dosal to the embryonic disc?

A- Amniotic cavity

B- yolk sac

C- neural tube

D- Notochord

13-All about the amniotic fluid which one is false?

A- secreted by the amniogenic cells of the amnion

B- excreted by the kidneys of the fetus

C- its a stagnant fluid

D- provides a medium in which the fetus floats

14-Following structures are derived from ectoderm except?

A- Brain

B- spinal cord

C- Adrenal cortex

D- Adrenal medulla

15-Allantois appear as a diverticulum from?

A- primary yolk sac

B- secondary yolk sac

C- amniotic cavity

D- intra embryonic cavity

16-Regarding the placenta all of the following is true EXCEPT?

A- It is a temporary organ

B- 15 to 25 cm

C- maternal surface formed by the chorionic plate

D- maternal blood never mixes with fetal blood

17-About The notochord all are true EXCEPT?

A- the first longitudinal midline axis of the embryo

B- the vertebral bodies are organized around it

C- develops from the endodermal cells of the primitive node

D- The notochordal process stops at the cloacal membrane

18-About implantation which one is correct?

A- occurs by the end of the 1st week after fertilization

B- commonly occurs at the upper part of the posterior wall of the uterus

C- occurs at morula stage

D- occurs after the disappearance of the zona pelucida

Written

As regards the Yolk sac complete the followings:

19-Its roof is formed by?

A- Hypoblast

20-The caudal part of the sac gives a diverticulum called?

A- Allantois

21-Communicates with the gut through the?

A- vitello-intestinal duct

22-mention parts of the decidua?

A- decidua basalis at the site of the placenta attachement

B- decidua capsularis at the site covering growing embryo

C- decidua parietalis at the rest of the uterine lining

Regarding the chorion:

23-the chorion forms the wall of the?

A- placenta

24-it consists of 3 layers from outside to inside which are .....,.....and?

A- syncytiotrophoblast

B- cytotrophoblast

C- somatic mesoderm

25-mention results of fertilization?

A- formation of the zygote

B- of the diploid number of chromosomes

C- of the embryonic development

Regarding the female genital system:

26-Muscular tubes that extend from the left and right superior corners of the uterus to the edge of the ovaries called .....

A- Fallopian tubes

27-The lower part of the uterus known as .....

A- Cervix

28-Connects the uterus to the exterior of the body

A- Vagina

29-The inner lining of the uterus, known as the.....

A- Endometrium

Regarding the male genital system:

30-A sac-like organ made of skin and muscles that houses the testes is called .....

A- Scrotum

31-sperm storage area is .....

A- Epididymis

32-.....carries sperm superiorly from the epididymis into the abdominal cavity to the ejaculatory duct

A- Vas deferens

MID 36 (ANATOMY)

33-The urethra in males is a common pathway for..... and .....

A- Urine and sperms

Answers - FINAL 35

وكابدوا المجد حتى مل أكثرهم

وعانق المجد من أوفى ومن صبرا

لا تحسب المجد تمرا أنت آكله

لن تبلغ المجد حتى تلعق الصبرا

1- Distal means?

A- Far from trunk

B- Near to the trunk

C- Near to the frontal

D- Near to the back

2- A muscular tube that connects the cervix to the exterior of the body is?

A- Fallopian tube

B- Endometrium

C- Myometrium

D- Vagina

3- All are true about the planes EXCEPT?

A- Median plane divides the body into right and left equal halves

B- Transverse plane divides the body into upper and lower parts

C- Sagittal plane is parallel to frontal plane

D- Coronal plane divides the body into anterior and posterior

4- The tube that carries urine from the kidney to the urinary bladder?

A- Ureters

B- Urethra

C- Nephrons

D- Penis

5- Urethra of female lies .....to vaginal orifice?

A- Anterior

B- Posterior

C- Medial

D- Lateral

6- Ejaculatory duct is the union of?

A- Urethra and seminal gland

B- Vas deferens and seminal gland

C- Urethra and vas deferens

D- Epididymis and ejaculatory duct

7- What is the type of blood vessels?

A- 2

B- 3

C- 4

D- 1

8- The ..... system is active during normal situations, permits digestion, and conservation of energy?

A- Parasympathetic

B- Sympathetic

C- Somatic

D- Automatic

9- The ..... muscle is non-striated and involuntary?

A- Cardiac

B- Smooth

C- Somatic

D- Skeletal

10- The type of fascia that fills the space between muscles is?

A- Deep

B- Superficial

C- Internal

D- External

11- The joint that allows movement in 2 axes?

A- Condyloid

B- Pivot

C- Hinge

D- Ball and socket

12- From the following selections, identify the directional terms equivalent to ventral, posterior, superior, and inferior in the correct sequence?

A- Anterior, dorsal, cephalic, caudal

B- Dorsal, anterior, caudal, cephalic

C- Caudal, cephalic, anterior, posterior

D- Cephalic, caudal, posterior, anterior

13-The pulmonary circulation?

A- Carries blood from the right ventricle to the lungs and back to the left atrium

B- Carries blood from the left ventricle to the body and back to the right atrium

C- Supplies blood with a high oxygen level to all tissues of the body

D- Veins carry blood with a low oxygen level

14-Type of growing bones is?

A- Primary cartilaginous joint

B- Secondary cartilaginous joint

C- Synovial joint

D- Fibrous joint

15-What is true about skin?

A- The superficial layer is dermis

B- The deep layer is epidermis

C- The dermis is avascular

D- The dermis contains sweat glands

16-What is false about anatomical position?

A- Eyes are lateral

B- Palms are anterior

C- The body is upward

D- The face directs forward

17-A bending movement that decreases the angle between two parts?

A- Flexion

B- Extension

C- Adduction

D- Abduction

18-Shaft of long bone is?

A- diaphysis

B- Epiphysis

C- compact

D- endometrium

Answers - MID 36 (ANATOMY)

عن أنس بن مالك أن رسول الله صلى الله عليه وسلم قال: (إِنَّ لِلَّهِ أَهْلِينَ مِنَ النَّاسِ قالوا: يا رسولَ اللَّهِ، من هُم ؟ قالَ: هم أَهْلُ القرآنِ، أَهْلُ اللَّهِ وخاصَّتُهُ)

FINAL 36 (EMBRYOLOGY)

1- Which of the following has 23 chromosomes?

A- Primary spermatocyte

B- Secondary spermatocyte

C- Sertoli

D- Spermatogonium

2- What is false about placenta previa?

A- It's below the fetus

B- The least dangerous is low-lying placenta

C- The implantation occurs in the cervix

D- Partial placenta covers partially internal os

3- What is false about meiosis?

A- It consists of 2 stages: meiosis I followed by meiosis II

B- First meiotic division gives 2 haploid cells

C- Second meiotic division forms 4 diploid cells

D- The purpose of meiosis is to produce gametes

4- The chorionic vesicle is characterized by the following EXCEPT?

A- Yolk sac

B- Amniotic cavity

C- Blood vessels

D- Secondary mesoderm

5- The intervillous space has?

A- Maternal blood

B- Fetal blood

C- Mix of fetal and maternal blood

D- Amnion

6- In humans, the number of ova and sperms that would be produced from 100 secondary oocytes and 100 secondary spermatocytes during gametogenesis is?

A- 100 ova and 100 sperm

B- 200 ova and 200 sperm

C- 100 ova and 200 sperm

D- 50 ova and 100 sperm

7- After a difficult labor, a female received twin babies that are fused at their sacral region. What is the name of such condition?

A- Conjoint twins

B- Vanishing twin

C- Twin-to-twin transfusion syndrome

D- Surviving twin

8- The first intraembryonic layer to differentiate?

A- Ectoderm and endoderm

B- Epiblast and hypoblast

C- Ectoderm and hypoblast

D- Endoderm and epiblast

9- All about neural tube are true EXCEPT?

A- Beneath to ectoderm

B- Ventral tubular structure

C- Dorsal to notochord

D- Formed by ectoderm

10-All the following are true about decidua EXCEPT?

A- Decidua capsularis is superficial to the blastocyst

B- Decidua parietalis lines the uterine cavity away from the blastocyst

C- Decidua capsularis fuses with decidua parietalis

D- Decidua is formed from uterine glands

11-The floor of yolk sac is made up of?

A- Heuser's membrane

B- Epiblast

C- Trophoblast

D- Cytotrophoblast

12-..... guide the mature ovum to enter the uterine tube?

A- Fimbria

B- Zona pellucida

C- Corona radiata

D- Decidua

13-Which statement about the amniotic sac is true?

A- It is lined up by cells of ectoderm from its beginning

B- It is lined up by cells of endoderm from its beginning

C- It is composed of cells derived from the epiblast

D- It disappears completely during the second week

14-All the following are true about spermiogenesis EXCEPT?

A- Golgi apparatus forms the acrosomal cap

B- Centriole forms the middle piece of sperm

C- There are chromosomal changes in the spermatids

D- The nucleus of spermatids forms the head

15-All the following are true about menstrual cycle EXCEPT?

A- Proliferative phase corresponds with formation of corpus luteum

B- The menstrual phase continues for 3–5 days

C- The proliferative phase is under effect of estrogen

D- In luteal phase the endometrium becomes edematous

16-All the following are true about fertilization EXCEPT?

A- Secondary oocyte completes 2nd meiotic division after penetration of zona pellucida

B- The initial step of fertilization is penetration of corona radiata

C- Fertilization occurs in the uterine tube

D- The process by which the ovum and sperm fuse together

17-All of the following occur in the first week of human development EXCEPT?

A- Formation of blastocyst

B- Formation of trophoblast

C- Formation of inner cell mass

D- Formation of chorionic vesicle

18-..... is a longitudinal strip of the margin of neural plate?

A- Notochord

B- Neural tube

C- Neural crest

D- Primitive streak

Written

19-Primitive male germ cell is called ..... While Primitive female germ cell is called?

A- Spermatogonia

B- oogonia

20-Supporting cells in the seminiferous tubule called ..... cells?

A- Sertoli

21-The ..... cells which secrete hormone testosterone?

A- Leydig

22-The accessory sex glands pour their secretions over the sperms to form the seminal fluid are .... , ...and?

A- Prostate

B- seminal vesicle

C- bulbourethral glands

As regards the Yolk sac

23-Its roof is formed by the?

A- hypoblast

24-The caudal part of the sac gives a diverticulum called?

A- allantois

2ND TRIAL 36

25-Communicates with the gut through the?

A- vitello-intestinal duct

26-It's functions includes.... , ...and?

A- Gives derivatives : The primitive gut, Allantois and forming part of urinary bladder, Primordial sex cells, Blood

As regards the Blastocyst formation

27-The blastocyst formed about the .....day of fertilization?

A- 6

28-It having a cavity called?

A- blastocele

29-Inner cell mass will develop into?

A- bilaminar embryonic disc (epiblast, hypoblast)

30-Outer cell mass differentiated into .....and.....

A- syncytiotrophoblast

B- cytotrophoblast

Answers - FINAL 36 (EMBRYOLOGY)

1	2	3	4	5	6	7	8	9	10
B	C	C	D	A	C	A	B	B	D
11	12	13	14	15	16	17	18	-	-
A	A	C	C	A	A	D	C	-	-

1- All arteries, veins, and lymphatic channels form from?

A- Ectoderm

B- Mesoderm

C- Endoderm

D- Chorionic Villi

2- The pulmonary circulation?

A- carries blood from the right ventricle to the lungs and back to the left atrium

B- carries blood from the left ventricle to the body and back to the right atrium

C- supplies blood with a high oxygen level to all tissues of the body

D- veins carry blood with a low oxygen level

3- The acrosome is formed from?

A- Nucleus

B- Golgi bodies

C- Centrosome

D- Mitochondria

4- Primitive streak originates?

A- In lateral parts of hypoblast

B- In lateral parts of epiblast

C- In the medial line of hypoblast

D- In the medial line of epiblast

5- Which statement about the neural plate is true?

A- Neural plate forms itself between the node of Hensen and cloacal membrane

B- Neural plate is the basic structure for neural tube and neural crests

C- Neural plate originates at the ventral side of the germ disc

D- Neural plate is of endodermal origin

6- cavity ventral to the embryonic disc?

A- amniotic cavity

B- yolk sac

C- neural tube

D- notochord

7- The point of fertilization occurs when?

A- Sperm are deposited in the vagina

B- Sperm penetrates the outer jelly coating of the egg

C- The sperm contacts the vitelline envelope

D- The sperm sheds the tail

8- About chorion all are true EXCEPT?

A- It forms the wall of the chorionic vesicle

B- Syncytiotrophoblast share in its formation

C- Intra-embryonic mesoderm share in its formation

D- Cytotrophoblast share in its formation

9- Urethra of females lies .....to the vaginal orfice?

A- anterior

B- posterior

C- medial

D- lateral

10-Ejaculatory duct is union of?

A- urethra and seminal gland

B- vas deferens and seminal gland

C- urethra and vas deferens

D- Epididymis and ejaculatory duct

11-.....guide the mature ova to the uterine tube?

A- fimbrai

B- zona pelucida

C- corona radiata

D- decidua

12-Following structures are derived from ectoderm except?

A- brain

B- spinal cord

C- Adrenal cortex

D- Adrenal medulla

13-cranial means?

A- inferior

B- superior

C- proximal

D- lateral

14-distal means?

A- towards the front

B- towards the back

C- near the trunk

D- far from the trunk

15-most widely known artery is?

A- aorta

B- pulmonary veins

16-.....forms protective external surface of all bones?

A- compact bone

B- spongy bone

C- cancellous bone

D- shaft of the bone

17-which of the following has 46 chromosomes?

A- primary spermatocytes

B- secondary spermatocytes

C- spermatids

D- sperms

18-All of the following occur in the first week of human development EXCEPT?

A- Formation of blastocyst

B- Formation of trophoblast

C- Formation of inner cell mass

D- Formation of chorionic vesicle

19-Placental barrier (membrane) consists of all of the following EXCEPT?

A- Syncytiotrophoblast

B- Cytotrophoblast

C- Endothelium of the fetal vessels

D- Cotyledons

20-The blood in the intervillous space is?

A- Maternal

B- Fetal

C- Mixed

D- from yolk sac

21-one of the following is true about superficial fascia?

A- superficial fascia is thin in the scalp

B- supports muscles and nerves

C- stores water and fat

22-.....is active during normal situations , permits digestion and conservation of the energy?

A- sympathetic nervous system

B- parasympathetic nervous system

23-All are true about decidua EXCEPT?

A- decidua parietalis forms the placenta

B- decidua capsularis covers the superficial aspect of the blastocyst

C- Decidua capsularis comes in contact or (fused) with the decidua parietalis

D- cidua parietalis lines the walls of the uterus away from the site of the blastocyst

24-..... phase is under the effect of the progesterone hormone?

A- follicular phase

B- proliferative phase

C- secretory phase

D- mensural phase

25-.....covers the inner layer of the capsule and bone but not covered with articular cartilage?

A- synovial membrane

Written

About Movements at joints :

26-A bending movement that decreases the angle between two parts called .....

A- Flexion

27-Moving away from the median plane of the body called.....

A- abduction

28-Rotation towards the axis of the body called .....

A- Internal rotation

Mention 3 factors lead to the rupture of the follicle

B- increase in the size of the follicle

C- thining of the overlying cortex of the ovary

D- rise of pressure of fluif inside the follicular atrium

As regards the Primary sex organs

29-Primitive male germ cell is called ..... While Primitive female germ cell is called ....

A- Spermatogonia , oogonia

30-Supporting cells in the seminiferous tubule called ..... cells

A- Sertoli cells

31-The ..... cells which secrete hormones (testosterone)

A- Leydig

32-The accessory sex glands pour their secretions over the sperms to form the seminal fluid are:.....,.....,.....

A- Seminal vesical

B- Prostate

C- Bulbourethral glands

As regards the Blastocyst formation

33-The blastocyst formed about the .....day of fertilization

A- Day 6

34-It having a cavity called .....

A- Blastocoele

35-Inner cell mass will develop into .....

A- bilaminar embryonic disc (epiblast, hypoblast

36-Outer cell mass differentiated into .....and .....

A- syncytiotrophoblast – cytotrophoblast

Complete:

37-oxygenated blood moves from the lung to the left atrium through .....

A- Four pulmonary veins

38-<u>fibroserous sac that encloses the heart and the root of its great vessels is.....</u>

A- Pericardium

39-<u>organ responsible for production of voice is .....</u>

A- Larynx

40-<u>fixed part of small intestine is .....</u>

A- duodenum

41-<u>blood passes from the left atrium to left ventricle through .....</u>

A- Mitral valve

42-<u>..... opening by which oesophagus communicates with the stomach</u>

A- Cardia (cardiac opening)

43-<u>each kidney consists of millions of functional units called .....</u>

A- Nephrons
